S5 Table. Summary of model parameters describing the contact behavior.

Parameter	Definition	Value/Eq.
λ_{Ext}	Infections from outside of the population	10/day
$\bar{R}_0$	Annual average basic reproduction number	3.5
a	Amplitude of the seasonal fluctuation of R_0	0.43
$t_{R_{0_{\max}}}$	Day when R_0 reaches its maximum	200
c_P	Relative contagiousness in prodromal period	0.5
c_I	Relative contagiousness in fully contagious stage	1
c_L	Relative contagiousness in late infectious stage	0.5
$\beta_P(t)$	Seasonally varying effective contact rate of prodromal ind.	(**??**)
$\beta_I(t)$	Seasonally varying effective contact rate of fully contagious ind.s	(**??**)
$\beta_L(t)$	Seasonally varying effective contact rate of late infectious ind.	(**??**)
$n^{(\text{Ge})}$	Average number of daily contacts of an individual in Ge	50
$n^{(\text{St})}$	Average number of daily contacts of an individual in St	50
$n^{(\text{Ri})}$	Average number of daily contacts of an individual in Ri	10
x	prob. for individual in Ge to meet with individual in Ge	99.61%
y	prob. for individual in Ge to meet with individual in St	0.375%
u	prob. for individual in St to meet with individual in Ge	61.35%
v	prob. for individual in the St to meet individual of the St	24.0%
p	prob. for individual in Ri to meet individual of the Ge	8.76%
q	prob. for individual in Ri to meet individual in St	52.32%

Description of parameters and their initial values chosen for the simulations. Equation numbers refer to **??**
