S4 Table. Summary of variables describing sub-population sizes in contagious compartments.

Name	Description	Initial value
$P_k^{(\mathrm{Ge})}$	No. infected Ge in kth prodromal state ($1 \leq k \leq n_P$)	0
$P_k^{(\mathrm{St},-)}$	No. infected undetected St in kth prodromal state ($1 \leq k \leq n_P$)	0
$P_k^{(\mathrm{St},*)}$	No. St in kth prodromal state, whose test results will be pos. ($1 \leq k \leq n_P$)	0
$P_k^{(\mathrm{St},+)}$	No. pos. tested St in kth prodromal state ($1 \leq k \leq n_P$)	0
$P_k^{(\mathrm{Ri})}$	No. Ri in kth prodromal state ($1 \leq k \leq n_P$)	0
$P_{\mathrm{Sum}}^{(\mathrm{Ge})}$	Total No. of Ge in prodromal states	0
$P_{\mathrm{Sum}}^{(\mathrm{St},-)}$	Total No. undetected infected St in prodromal states	0
$P_{\mathrm{Sum}}^{(\mathrm{St},*)}$	Total No. of St in prodromal states, whose test results will be pos.	0
$P_{\mathrm{Sum}}^{(\mathrm{St},+)}$	Total No. of pos. tested St in prodromal states	0
$P_{\mathrm{Sum}}^{(\mathrm{Ri})}$	Total No. of Ri in prodromal states	0
$I_k^{(\mathrm{Ge})}$	No. infected Ge in kth fully contagious state ($1 \leq k \leq n_I$)	1
$I_k^{(\mathrm{St},-)}$	No. infected undetected St in kth fully contagious state ($1 \leq k \leq n_I$)	0
$I_k^{(\mathrm{St},*)}$	No. St in kth fully contagious state, whose test results will be pos. ($1 \leq k \leq n_I$)	0
$I_k^{(\mathrm{St},+)}$	No. pos. tested St in kth fully contagious state ($1 \leq k \leq n_I$)	0
$I_k^{(\mathrm{Ri})}$	No. Ri in kth fully contagious state ($1 \leq k \leq n_I$)	0
$I_{\mathrm{Sum}}^{(\mathrm{Ge})}$	Total No. of Ge in fully contagious states	1
$I_{\mathrm{Sum}}^{(\mathrm{St},-)}$	Total No. undetected infected St in fully contagious states	0
$I_{\mathrm{Sum}}^{(\mathrm{St},*)}$	Total No. of St in fully contagious states, whose test results will be pos.	0
$I_{\mathrm{Sum}}^{(\mathrm{St},+)}$	Total No.of pos. tested St in fully contagious states	0
$I_{\mathrm{Sum}}^{(\mathrm{Ri})}$	Total No. of Ri in fully contagious states	0
$L_k^{(\mathrm{Ge})}$	No. infected Ge in kth late infectious state ($1 \leq k \leq n_L$)	0
$L_k^{(\mathrm{St},-)}$	No. infected undetected St in kth late infectious state ($1 \leq k \leq n_L$)	0
$L_k^{(\mathrm{St},*)}$	No. St in kth late infected state, whose test results will be pos. ($1 \leq k \leq n_L$)	0
$L_k^{(\mathrm{St},+)}$	No. pos. tested St in kth late infectious state ($1 \leq k \leq n_L$)	0
$L_k^{(\mathrm{Ri})}$	No. Ri in kth late infectious state ($1 \leq k \leq n_L$)	0
$L_{\mathrm{Sum}}^{(\mathrm{Ge})}$	Total No. of Ge in late infectious states	0
$L_{\mathrm{Sum}}^{(\mathrm{St},-)}$	Total No. infected undetected individuals in late infectious state in St	0
$L_{\mathrm{Sum}}^{(\mathrm{St},*)}$	Total No. of St in late infected states, whose test results will be pos.	0
$L_{\mathrm{Sum}}^{(\mathrm{St},+)}$	Total No.of pos. tested St in late infectious states	0
$L_{\mathrm{Sum}}^{(\mathrm{Ri})}$	Total No. of Ri in late infectious states	0

Description of variables and their initial values chosen for the simulations.
