Abstract

We examine perceived and idea ownership of US patient medical data as governed by HIPPA in a survey of three stakeholder groups: patients, primary care physicians, and medical administrators. Current and ideal unbundled ownership were measured with six questions about the rights to access, control access, profit, modify, destroy and transfer rights. First, we find that there is an underestimation of the patients' rights in their medical data across all three samples of stakeholders. Second, all stakeholders agree on expanding patients' rights and curtailing rights afforded to health systems.

Methods

514 US adults participated in the study, divided into three samples: $N = 300$ patients from Lucid Theorem, a nationally representative sample with respect to age, gender, ethnicity and geography; $N = 114$ primary care physicians recruited from Survey Health Global and $N = 100$ medical administrators recruited from Survey Health Global.

Current and ideal unbundled ownership were measured with six questions about the rights to access, control access, profit, modify, destroy and transfer rights. In the "current" condition, the items read "Subject to some exceptions, who *currently* possesses the legal right to access a patient's electronic health records data (e.g., view it)?" while in the "ideal" condition, the items read "Subject to some exceptions, who *should* possess the legal right to access a patient's electronic health records data (e.g., view it)?". The full list of questions is available in Tables 1-2. Overall, participants were asked 2 (currently vs. ideal) * 6 (legal rights) questions in a within-subject design. The current vs. ideal condition were counterbalanced. The order of the six legal rights was randomized. For each of the 12 questions, participants could select multiple answers (e.g., "patients", "medical providers" or "health systems").

We collected additional demographic variables: whether the participant worked in healthcare industry, job position, gender, age, health status, insurance, race, political orientation, income (see Tables 3-4).

The present research involved no more than minimal risks, and all study participants were 18 years of age or older. The study was approved for use with human participants by the Institutional Review Boards of the Charles River Campus at Boston University (protocol 3632E) and of the Erasmus University Erasmus Research Institute of Management (ETH2122-0846). Informed consent was obtained for all participants. Pre-registration, raw data and R script files are available on our Open Science Framework repository at: https://osf.io/j7z26/.

Results

The descriptive statistics on current and ideal ownership are presented in Tables 5-7.

First, we started by pooling all samples together and examined the differences in current compared to ideal ownership. We estimated paired-sample t-tests for each stakeholder, as illustrated in Figure 1. We find that all samples agree that patients should hold more rights than they currently possess (t(513) = 10.25, $p < .001$) health systems should hold less rights than they currently possess (t(513) = -11.79, $p < .001$), and medical providers should hold less rights than they currently possess (t(513) = -3.45, $p < .001$).

Second, we tested whether the patient sample underestimate the rights that patients currently possess. We computed an accuracy score of the rights correctly attributed to each stakeholder, which varies from 0 (none of the rights correctly attributed) vs. 6 (all rights correctly attributed). The number of correctly attributed rights is available in Appendix 3. We used a one-sample t-test on the number of rights accurately attributed to patients and test value 4 (number of correct rights), on the patient sample. We find that patients indeed under-estimate the number of rights they currently possess ($m = 3.18$, t(299) = -14.29, $p < .001$).

Third, we estimated a regression on the number of rights *currently* attributed to patients, with two dummies (patient sample vs. medical provider sample; patient sample vs. medical administrator sample. Contrary to our prediction, we find that the average number of rights attributed to patients was significantly lower ($b = -.48$, $t = -2.17$, $p = .03$) in the medical provider sample ($m = 2.98$) than in the patient sample ($m = 3.46$). There was no difference between the patient sample and medical administrator sample ($b = -.38$, t = -1.61, $p = .11$).

Fourth, we estimated a regression on the number of rights *accurately* attributed to patients, with two dummies (patient sample vs. medical provider sample; patient sample vs. medical administrator sample. We find that the average number of rights *accurately* attributed to patients was higher ($b = .21$, $t = 1.94$, $p = .05$) in the medical provider sample ($m = 3.39$) than in the patient sample ($m = 3.18$). There was no difference between the patient sample and medical administrator sample ($b = .08$, $t = .67$, $p = .50$).

Last, we estimated a regression on the number of rights *ideally* attributed to patients, with two dummies (patient sample vs. medical provider sample; patient sample vs. medical administrator sample. We find that the average number of rights *ideally* attributed to patients was lower ($b = -.83$, $t = -4.06$, $p < .001$) in the medical provider sample ($m = 3.57$) than in the patient sample ($m = 4.40$). There was no difference between the patient sample and medical administrator sample ($b = -.26$, $t = -1.22$, $p = .22$).

Table 1. Current and ideal ownership of rights to electronic health records

Right #	Current ownership	Ideal ownership
Right #1: Access	Subject to some exceptions, who currently possesses the legal right to access a patient's electronic health records data (e.g., view it)?	Subject to some exceptions, who should possess the legal right to access a patient's electronic health records data (e.g., view it)?
Right #2: Control access	Subject to some exceptions, who currently possesses the legal right to control access to a patient's electronic health record data (e.g., decide who can view it)?	Subject to some exceptions, who should possess the legal right to control access to a patient's electronic health record data (e.g., decide who can view it)?
Right #3: Profit	Subject to some exceptions, who currently possesses the legal right to profit from or commercialize a patient's electronic health records data (e.g., by selling it)?	Subject to some exceptions, who should possess the legal right to profit from or commercialize a patient's electronic health records data (e.g., by selling it)?
Right #4: Modify	Subject to some exceptions, who currently possesses the legal right to modify a patient's electronic health records data (e.g., correct errors, make changes)?	Subject to some exceptions, who should possess the legal right to modify a patient's electronic health records data (e.g., correct errors, make changes)?
Right #5: Destroy	Subject to some exceptions, who currently possesses the legal right to destroy a patient's electronic health records data (e.g., delete all or part of it)?	Subject to some exceptions, who should possess the legal right to destroy a patient's electronic health records data (e.g., delete all or part of it)?
Right #6: Transfer	Subject to some exceptions, who currently possesses the legal right to transfer their property rights for a patient's electronic health records data (e.g., selling their own interest in that particular record)?	Subject to some exceptions, who should possess the legal right to transfer their property rights for a patient's electronic health records data (e.g., selling their own interest in that particular record)?

Table 2. Legal rights to electronic health records by stakeholder

Right #	Question in the survey	Patient	Provider	Health system
Right #1: Access	Subject to some exceptions, who currently possesses the legal right to access a patient's electronic health records data (e.g., view it)?	1	1	1
Right #2: Control access	Subject to some exceptions, who currently possesses the legal right to control access to a patient's electronic health record data (e.g., decide who can view it)?	1	0	1
Right #3: Profit	Subject to some exceptions, who currently possesses the legal right to profit from or commercialize a patient's electronic health records data (e.g., by selling it)?	1	0	1
Right #4: Modify	Subject to some exceptions, who currently possesses the legal right to modify a patient's electronic health records data (e.g., correct errors, make changes)?	1	1	1
Right #5: Destroy	Subject to some exceptions, who currently possesses the legal right to destroy a patient's electronic health records data (e.g., delete all or part of it)?	0	0	0
Right #6: Transfer	Subject to some exceptions, who currently possesses the legal right to transfer their property rights for a patient's electronic health records data (e.g., selling their own interest in that particular record)?	0	0	1

Note: Binary score indicates stakeholder legal possesses right under HIPAA (1) or does not (0)

Table 3. Demographic measures

Measure	Details
Health status	Would you say your health in general is... poor, fair, good, very good, excellent, PNTA
Insurance	Medicaid, Medicare, Private, Other, None, PNTA
Political orientation	Please locate yourself on the following scale of political orientation 1: extremely liberal to 7: extremely conservative
Age group	18-24, 25-34, 35-44, 45-54, 55-64, 65+, PNTA
Gender	Male, Female, Non-Binary, PNTA
Race	American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Pacific Islander, White, Other, PNTA
Income	<15k, 15k-29.9k, 30k-44.9k, 45k-59.9k, 60k-74.9k, 75k-99.9k, 100k-149.9k, 150k+

Note: PNTA prefer not to answer

Table 4. Demographics

	Patient sample (N=300)	Medical provider sample (N = 114)	Medical administrator sample (N = 100)
Gender			
Male	47%	67%	52%
Female	53%	29%	46%
Non-Binary	0%	2%	0%
Prefer not to answer	0%	3%	2%
Age			
18-24	12%	0%	1%
25-34	22%	4%	2%
35-44	17%	18%	25%
45-54	17%	27%	34%
55-64	16%	30%	28%
65+	17%	18%	9%
Prefer not to answer	0%	4%	1%
Income			
<$15k	18%	0%	0%
$15k to $29.9k	19%	0%	1%

Insurance			
Medicaid	21%	0%	0%
Medicare	31%	12%	7%
Private	32%	85%	87%
Other	7%	2%	4%
None	8%	1%	0%
Prefer not to answer	0%	0%	2%
Political orientation (1: liberal to 7: conservative)	m = 4.43	m = 4.61	m = 4.83
Health status (1: poor to 5: excellent)	m = 3.12	m = 4.03	m = 4.07

Table 5. Rights patients do possess and should possess by stakeholder

	Patient sample (N=300)	Medical provider sample (N=114)	Medical admin. Sample (N=100)	Pooled sample (N=514)
#1 Right to access a patient's EHR data (✓)				
Patients <u>currently</u> possess that right	73%	82%	91%	78%
Patients <u>should</u> possess that right	83%	82%	89%	84%
#2 Right to control access to a patient's EHR data (✓)				
Patients <u>currently</u> possess that right	64%	59%	59%	62%
Patients <u>should</u> possess that right	79%	65%	77%	75%
#3 Right to profit from patient's EHR data (✓)				
Patients <u>currently</u> possess that right	47%	43%	35%	44%
Patients <u>should</u> possess that right	69%	68%	73%	70%
#4 Right to modify a patient's EHR data (✓)				
Patients <u>currently</u> possess that right	48%	35%	32%	42%
Patients <u>should</u> possess that right	60%	31%	44%	50%
#5 Right to destroy a patient's EHR data (✗)				
Patients <u>currently</u> possess that right	53%	32%	35%	45%
Patients <u>should</u> possess that right	70%	50%	57%	63%
#6 Right to transfer rights for a patient's EHR data (✗)				
Patients <u>currently</u> possess that right	60%	47%	56%	57%
Patients <u>should</u> possess that right	79%	61%	74%	74%

Note: (✓) means that patients currently legally possess that right, and (✗) means that patients do not legally possess that right. For each of the six legal rights, we report the percentage of participants who indicated that "patients" *currently possess* and *should possess* the right in question.

Table 6. Rights health systems do possess and should possess by stakeholder

	Patient sample (N=300)	Medical provider sample (N=114)	Medical admin. Sample (N=100)	Pooled sample (N=514)
#1 Right to access a patient's EHR data (✓)				
Health systems <u>currently</u> possess that right	50%	65%	77%	59%
Health systems <u>should</u> possess that right	42%	51%	69%	49%
#2 Right to control access to a patient's EHR data (✓)				
Health systems <u>currently</u> possess that right	43%	58%	59%	49%
Health systems <u>should</u> possess that right	21%	36%	41%	28%
#3 Right to profit from patient's EHR data (✓)				
Health systems <u>currently</u> possess that right	49%	59%	59%	53%
Health systems <u>should</u> possess that right	25%	22%	26%	25%
#4 Right to modify a patient's EHR data (✓)				
Health systems <u>currently</u> possess that right	40%	39%	44%	40%
Health systems <u>should</u> possess that right	28%	20%	43%	29%
#5 Right to destroy a patient's EHR data (✗)				
Health systems <u>currently</u> possess that right	43%	53%	57%	48%
Health systems <u>should</u> possess that right	28%	32%	40%	31%
#6 Right to transfer rights for a patient's EHR data (✓)				
Health systems <u>currently</u> possess that right	40%	53%	44%	43%
Health systems <u>should</u> possess that right	21%	28%	27%	24%

Note: (✓) means that health systems legally possess that right, and (✗) means that health systems do not legally possess that right. For each of the six legal rights, we report the percentage of participants who indicated that "healthy systems" *currently possess* and *should possess* the right in question.

Table 7. Rights attributed to medical providers

	Patient sample (N=300)	Medical provider sample (N=114)	Medical admin. Sample (N=100)	Pooled sample (N=514)
#1 Right to access a patient's EHR data (✓)				
Medical providers <u>currently</u> possess that right	73%	92%	96%	82%
Medical providers <u>should</u> possess that right	65%	97%	93%	78%
#2 Right to control access to a patient's EHR data (✗)				
Medical providers <u>currently</u> possess that right	55%	61%	55%	56%
Medical providers <u>should</u> possess that right	41%	75%	53%	51%
#3 Right to profit from patient's EHR data (✗)				
Medical providers <u>currently</u> possess that right	43%	22%	24%	34%
Medical providers <u>should</u> possess that right	30%	26%	24%	28%
#4 Right to modify a patient's EHR data (✓)				
Medical providers <u>currently</u> possess that right	70%	86%	94%	78%
Medical providers <u>should</u> possess that right	66%	93%	92%	77%
#5 Right to destroy a patient's EHR data (✗)				
Medical providers <u>currently</u> possess that right	52%	48%	48%	50%
Medical providers <u>should</u> possess that right	38%	52%	49%	43%
#6 Right to transfer rights for a patient's EHR data (✗)				
Medical providers <u>currently</u> possess that right	44%	32%	32%	39%
Medical providers <u>should</u> possess that right	33%	37%	32%	34%

Note: (✓) means that providers currently possess that right in reality, and (✗) means that providers do not currently possess that right in reality. For each of the six legal rights, we report the percentage of participants who indicated that "providers" *currently possess* and *should possess* the right in question.

Figure 1. Average number of rights attributed to stakeholders by sample

A. Number of rights *currently* attributed to the three stakeholders

B. Number of rights *accurately* attributed to the three stakeholders

C. Number of rights *ideally* attributed to the three stakeholders

☐ Rights attributed to patients

▨ Rights attributed to medical providers
