Genome-wide variations of SARS-CoV-2

infer evolution relationship and transmission route

The authors have withdrawn this manuscript (Genome-wide variations of SARS-CoV-2 infer evolution relationship and transmission route) from medRxiv, because it was found that the statistical and analytical methods used in the manuscript had certain controversies after further discussion, so the authors of the manuscript disclaimed that this conclusion cannot be used as the basis for the origin and evolution of SARS-COV-2, also as information to guide clinical practice and health-related behaviors, it should not be reported as established facts in

NOTE: This preprint reports new research that has not been certified by peer review and should not be used to guide clinical practice.

the news media and "We-Media". No one should do too much extended interpretation of the content of this manuscript. Therefore, the authors do not wish this work to be cited as reference for the project. If you have any questions, please contact the corresponding author.
