Appendix C. IRB approval letter

Appendix D. Supplementary Data Tables

- **Table D1. Analysis of all subjects.** Target date found to have the most subjects with significant differences for each activity. Average z-scores for month-to-month % change (Aug-Dec 2019). Before % changes compare activity changes from Jan 1 – target date and target date – May 31. After % changes compare activity changes from target date-May 31 and June 1 – Aug 31.
- **Table D2. Cluster Membership Data.** Comparing % change in activity before the target date and after the target date to May 31, 2020 for each cluster. (a) Comparing % change in activity after the target date to May 31 and June 1 – August 31, 2020 for each cluster. (b) Z-scores are comparing month-to-month changes from Aug – December of 2019.
- **Table D3. Pandemic survey answers and activity.** Answers to the survey question about exercise and activity levels compared to sedentary time and steps provided by Fitbit.
- **Table D4. Pandemic survey answers and sleep.** Total sleep time and wake time after sleep onset compared to answers from the Pandemic Survey.

Appendix E. Demographic Figures - * indicate $p < 0.1$, ** $p < 0.05$

❖ Before/During Stay-at-Home Orders:

- **Figure E1.** Overall demographics and health data on all subjects included in before/during dataset. Subjects were given a questionnaire upon entering the study.
- **Figure E2.** REM trend before/during SAHO by demographic and health data.
- **Figure E3.** Step trend before/during SAHO by demographic and health data.
- **Figure E4.** Resting heart rate trend before/during SAHO by demographic and health data.

- **Figure E5.** Wake trend before/during SAHO by demographic and health data.
- **Figure E6.** Sedentary active trend before/during SAHO by demographic and health data.
- **Figure E7.** Total sleep time trend before/during SAHO by demographic and health data.
- **Figure E8.** REM trend by demographics and health data before/during SAHO divided by those that increased or decreased activity.
- **Figure E9.** Step trend by demographics and health data before/during SAHO divided by those that increased or decreased activity.
- **Figure E10.** Resting heart rate trend by demographics and health data before/during SAHO divided by those that increased or decreased activity.
- **Figure E11.** Wake trend by demographics and health data before/during SAHO divided by those that increased or decreased activity.
- **Figure E12.** Sedentary active trend by demographics and health data before/during SAHO divided by those that increased or decreased activity.
- **Figure E13.** Total sleep time trend by demographics and health data before/during SAHO divided by those that increased or decreased activity.

❖ **During/After Stay-at-Home Orders:**

- **Figure E14.** Overall demographics and health data on all subjects included in during/after dataset. Subjects were given a questionnaire upon entering the study.
- **Figure E15.** REM trend during/after SAHO by demographic and health data.
- **Figure E16.** Step trend during/after SAHO by demographic and health data.
- **Figure E17.** Resting heart rate trend during/after SAHO by demographic and health data.
- **Figure E18.** Wake trend during/after SAHO by demographic and health data.
- **Figure E19.** Sedentary active trend during/after SAHO by demographic and health data.
- **Figure E20.** Total sleep time trend during/after SAHO by demographic and health data.
- **Figure E21.** REM trend by demographics and health data during/after SAHO divided by those that increased or decreased activity.
- **Figure E22.** Step trend by demographics and health data during/after SAHO divided by those that increased or decreased activity.
- **Figure E23.** Resting heart rate trend by demographics and health data during/after SAHO divided by those that increased or decreased activity.
- **Figure E24.** Wake trend by demographics and health data during/after SAHO divided by those that increased or decreased activity.
- **Figure E25.** Sedentary active trend by demographics and health data during/after SAHO divided by those that increased or decreased activity.
- **Figure E26.** Total sleep time trend by demographics and health data during/after SAHO divided by those that increased or decreased activity.

❖ **Cluster Membership Demographics**

- **Figure E27.** Demographic and health graphs for clusters found by Shrinkage Clustering method from the dataset containing the % change in means and slope of the linear trendlines comparing before/during the SAHO.
- **Figure E28.** Mean % change (left) and % change of slope of the linear trendline (right) for before/during the SAHO by activity.
- **Figure E29.** Mean % change (left) and % change of slope of the linear trendline (right) for before/during the SAHO by cluster.

- **Figure E30.** Demographic and health graphs for clusters found by Shrinkage Clustering method from the dataset containing the % change in means and slope of the linear trendlines comparing during/after the SAHO.
- **Figure E31.** Mean % change (left) and % change of slope of the linear trendline (right) for during/after the SAHO by activity.
- **Figure E32.** Mean % change (left) and % change of slope of the linear trendline (right) for during/after the SAHO by cluster.

Appendix F. Highlighted Activity Trends by Cluster

- **Figure F1.** Sedentary active minutes (a) and steps (b) for cluster 1 before/during SAHO.
- **Figure F2.** Steps for cluster 2 before/during SAHO.
- **Figure F3.** Sedentary active minutes (a) and steps (b) for cluster 3 before/during SAHO.
- **Figure F4.** Sedentary active minutes (a) and REM duration (b) for cluster 4 before/during SAHO.
- **Figure F5.** Steps for cluster 2 during/after SAHO.
- **Figure F6.** REM duration (a), steps (b), and wake duration (c) for cluster 3 during/after SAHO.

Appendix G. Self-evaluation of activity. Survey provided to participants and the general public via email (B1) and results from the survey (B2)

Appendix H. Fitbit Data File.

Appendix A. Overview of collected activity data

Figure A1. Timeline of data collected by Fitbit over a 24-hour period.

Heart Rate	Activity	Sleep	Surveys
Resting HR	Steps	Total Sleep Duration	Demographic
Average HR	Activity Level Minutes	Nap Duration and Nap Count	Health
Max HR	Activity Level Miles	Individual Sleep Stage Duration and %	Activity During the Pandemic
Time of Max HR		Bedtime	
		Number of Sleep Stage Transitions	

Table A1. Table of the types of data collected for this project. Subjects in the study were provided with a Fitbit Charge 3 (device shown at right).

Appendix B. Supplemental Methods

B1. Statistical Tests

Figure	Statistical Test	Implementation	Parameters
Figure 1B	Two-sided t-test for independent samples	SciPy.stats	Equal_var: True Nan_policy: 'omit'
Figure 2A/Appendix E	Two-sided t-test for independent samples	SciPy.stats	Equal_var: False (Welch's t-test)
Figure 2B/Appendix E	Fisher Exact test	SciPy.stats	Alternative: 'two-sided'

B2. Linear regression models for trends in activity

The slope of the linear trendline was defined as:

$$\frac{\Delta A}{\Delta time} = \frac{A_0 - A_i}{t_0 - t_i},$$

where A = activity metric, 0 = original date, i = subsequent date

For example, more subjects had a significant change in average REM duration per night starting on March 23 than other dates. We compared the mean REM duration per night for all individuals from Jan 1 to March 23 and March 23 to May 31. To assess trends in REM, we also calculated the slopes of the linear regression model for daily REM duration from Jan 1 to March 23, and March 23 to May 1. Analogous calculations were performed for each of the six activity metrics.

- Δ Slope Wake Time (%)^{1,2}
- Δ Slope Sedentary Time (%)^{3,4}
- Δ Slope Steps (%)⁵
- Δ Slope Resting Heart Rate (%)^{6,7}
- Δ Slope REM Time (%)⁸
- Δ Slope Total Sleep Time (%)^{1,2}

B3. Metrics used for Shrinkage Clustering

- Δ Slope Wake Time (%)^{1,2}
- Δ Slope Sedentary Time (%)^{3,4}
- Δ Slope Steps (%)⁵
- Δ Slope Resting Heart Rate (%)^{6,7}
- Δ Slope REM Time (%)⁸
- Δ Slope Total Sleep Time (%)^{1,2}
- Δ Mean Wake Time (%)
- Δ Mean Sedentary Time (%)
- Δ Mean Steps (%)
- Δ Mean Resting Heart Rate (%)
- Δ Mean REM Time (%)
- Δ Mean Total Sleep Time (%)

B4. Parameters used in Shrinkage Clustering

Analysis	Method	Normalization	Implementation	Parameters
Cluster Analysis	Shrinkage Clustering ⁹	Min-Max Normalization: $(v-min)/(max-min)$	R Studio	s = simiMatrix w = 5 k = 20 iter = 500 random = 1

 Amina.qutub@utsa.edu

Dear Principal Investigator:

On June 26, 2019 the IRB approved the following:

Type of review:	Modification – Repository & study
Title:	Profiling Cognitive Changes: Cells to Systems (Quantu Project)
Principal investigator:	Amina Ann Qutub, Ph.D.
IRB number:	19-077R
Grant title and ID, if any:	UTSA start-up (DGE045); NSF (pending)
Documents reviewed:	Modification Application; Research Personnel; Protocol (2) – Main & Repository; Consents (2) – Main & Repository;

No later than one month prior to your approval anniversary date, you are to respond to the IRB annual check-in e-mail to request continuing oversight, or closure. This e-mail will be sent to you approximately six weeks prior to the approval anniversary date of 04/11/2020.

Copies of any approved consent documents, consent scripts, or assent documents are attached.

When you have completed all research activities for the above listed study, please notify our office to close the study.

In conducting this study, you are required to follow the requirements in “INVESTIGATOR GUIDANCE: Investigator Obligations (HRP-800).”

Sincerely,

Tammy Lopez, J.D., C.I.P.

Appendix G: Self-Evaluation of Activity

Data recorded by the wearable devices for the 40 subjects in Group B differed from self-reported activity on a number of metrics including steps and sleep quality (see Figure 4, main text). For example, 55% (18/40) of subjects indicated ‘no change’ in activity while increasing their daily steps ($+20.4 \pm 18.6\%$) or while increasing sedentary time ($+2.6 \pm 1.7\%$) and decreasing steps ($-15.2 \pm 11.1\%$). 75% (30/40) of subjects indicated “no change” in the number of times they woke during the night, when the devices recorded them waking up 6-9% more or less frequently (see Tables E3 and E4 in Appendix E).

G1. Survey Questions

Online survey accessible at

https://quantuproject.typeform.com/report/EXJ64M/q3qvPXhVO9ZHqtcS?view_mode=print

G2. Survey Results: answers from subjects (Group B) and the public

Brain Health & the Pandemic

How has the COVID 19 pandemic altered your lifestyle and brain-healthy habits like good nutrition, exercise, social interactions & stress relief?

Notes: This survey and all questions are voluntary. We will use survey results to study how the pandemic and stay-at-home orders are affecting lifestyle factors that influence our brains' health. Data is anonymized and aggregated prior to any analysis. Our goal is to develop approaches that mitigate long-term risks to cognitive health.

1. Are you currently enrolled in the Quantu project? Yes or no
- a. If yes, what is your name? (last name, first name)

If no... (only for survey participants NOT in Quantu study.)

2. What is your age?
3. Gender: male, female, other
4. Race: African American or Black, American Indian or Alaska Native, Asian, Native Hawaiian or Pacific Islander, White, Multiracial, Other
5. Ethnicity: Hispanic or Latino, not Hispanic or Latino
6. What is the highest level of education you have achieved: less than a high school diploma, high school degree or equivalent, Associates degree, Bachelor's degree (e.g. BA or BS), Master's Degree (e.g. MA, MS, MBA), Doctorate (e.g. PhD, EdD) or Professional Degree (e.g. MD, JD)
7. Do you have children under the age of 18 in the home: yes or no
8. What is your household income per year? Below \$10K, \$10K - \$35K, \$35 - \$50K, \$50K - \$75K, \$75K - \$100K, \$100K or more

9. How many people live in your household?
10. Do you have children under the age of 18 in the home?
11. Please describe your household:
 - a. I live alone.
 - b. I live with immediate family. (Spouse/partner, children)
 - c. I live with extended family (Grandchildren, etc.)
 - d. I live with a roommate.
 - e. I live with multiple roommates.
 - f. I live in a facility (nursing home, hospital, assisted living)
 - g. other

12. In which city or region are you located?
 - a. Houston area
 - b. San Antonio area
 - c. Los Angeles area
 - d. CA Bay area
 - e. Other

13. How would you describe the area in which you live?
 - a. Urban
 - b. Suburban
 - c. Rural (within 25 miles of the city)
 - d. Rural (more than 25 miles)

14. Is your area currently under shelter-in-place orders (federal, state, or local)?
 - a. Yes
 - b. No
 - c. Unsure

15. Have you tried to comply with shelter-in-place orders?
 - a. Yes
 - b. No

16. Were you working outside of the home prior to shelter-in-place orders?
 - a. Full time
 - b. Part time
 - c. Retired
 - d. Unemployed

17. How has/had your employment status changed while stay-at-home orders were issued? Check as many as apply.
 - a. No change
 - b. Increased hours
 - c. Reduced hours
 - d. Furloughed (anticipating going back to the same employer)
 - e. Laid off (not anticipating going back to the same employer)
 - f. Working partially/exclusively from home
 - g. Other

18. Are you considered an essential worker?
 - a. Yes

- b. No
 - c. Unsure
19. What was your activity level in the months before Covid19 stay-at-home orders?
- a. High to very high (>10K steps/day, running, daily workouts, etc.)
 - b. Moderate to high (5-10K steps/day, workouts a few times a wk)
 - c. Limited to moderate (2-5K steps/day, occasional workouts)
 - d. Sedentary (<2K steps/day, no workouts)
20. What is your activity level since Covid19 stay-at-home orders were issued?
- a. High to very high (>10K steps/day, running, daily workouts, etc.)
 - b. Moderate to high (5-10K steps/day, workouts a few times a week)
 - c. Limited to moderate (2-5K steps/day, occasional workouts)
 - d. Sedentary (<2K steps/day, no workouts)
21. Have the stay-at-home orders affected your activity levels?
- a. Yes
 - b. No
 - c. Unsure
22. What are the main reasons for your activity changes?
- a. My motivation to exercise changed with the pandemic.
 - b. Gyms and fitness centers are closed.
 - c. I have been limiting time spent outside.
 - d. I usually exercise in a group/social circle that are limiting contact.
 - e. Illness
 - f. Other:
23. What was your level of remote/virtual interactions in the months before stay-at-home orders?
This includes phone calls, video conferencing, online/text chatting, etc.
- a. High to very high (daily)
 - b. Moderate to high (weekly)
 - c. Limited to moderate (occasional)
 - d. Low (rarely/never)
24. How have your remote/virtual social interactions changed? This includes phone calls, video conferencing, online chatting, etc.?
- a. Decreased in frequency
 - b. Remained the same
 - c. Increased in frequency

25. What was your level of in-person interactions in the months before stay-at-home orders? In-person interactions can include a partner, children or colleagues?

- a. High to very high (daily)
- b. Moderate to high (weekly)
- c. Limited to moderate (occasional)
- d. Low (rarely/never)

26. How have your in-person interactions changed?

- a. Decreased in frequency
- b. Remained the same
- c. Increased in frequency

27. Do you feel isolated?

28. How has your diet changed since stay-at-home orders were in place?

- a. Healthier
- b. Less healthy
- c. Remained the same

29. How has your sleep changed since stay-at-home orders were in place? Check all that apply

- a. Less consistent sleep schedule
- b. More consistent sleep schedule
- c. Shorter in duration
- d. Longer in duration
- e. Waking earlier
- f. Waking later
- g. Earlier bedtime
- h. Later bedtime
- i. More naps
- j. Fewer naps
- k. Waking more frequently during the night
- l. Waking less frequently during the night
- m. No change

30. Have you been doing anything for stress relief?

31. If so, what have you been doing to relieve stress?

A quick note on ways Quantu Project volunteers and team members are helping fellow volunteers, friends, and our communities:

Remote Exercise (<https://www.quantuproject.org/onlineexercise>): Partnering with trainer Teofilo (Teo) Reyes we are offering remote exercise classes to all volunteers and friends Monday, Wednesdays and Fridays through May 15.

Recovery & Resource website (<https://www.covid19recoverytexas.org/>): With the help of students and faculty at UTSA, we built a Recovery & Resource website that includes pages listing resources (like options for grocery delivery or financial help), dates when institutes open, and daily living tips. The site works by crowdsourcing information from the public. Everyone can make a difference by providing updates.

Other volunteering: Quantu Project members are also volunteering with Big Brothers Big Sisters to remotely teach computer programming to children. The Recovery website also provides additional suggestions on volunteering (<https://www.covid19recoverytexas.org/help>).

Contact us if you're interested in joining these efforts or have suggestions.

32. Any other questions or suggestions?

Thank you – The Quantu Project Team @quantuproject.org

Add in the following questions:

What is your activity level after Covid19 stay-at-home orders were lifted?

- a. High to very high (>10K steps/day, running, daily workouts, etc.)
- b. Moderate to high (5-10K steps/day, workouts a few times a week)
- c. Limited to moderate (2-5K steps/day, occasional workouts)
- d. Sedentary (<2K steps/day, no workouts)
- e. I am currently under stay-at-home orders.

What is your level of remote/virtual interactions after stay-at-home orders were lifted? This includes phone calls, video conferencing, online/text chatting, etc.

- a. High to very high (daily)
- b. Moderate to high (weekly)
- c. Limited to moderate (occasional)
- d. Low (rarely/never)
- e. I am currently under stay-at-home orders.

What is your level of in-person interactions after stay-at-home orders were lifted. In-person interactions can include a partner, children or colleagues?

- a. High to very high (daily)

- b. Moderate to high (weekly)
- c. Limited to moderate (occasional)
- d. Low (rarely/never)

How has/had your employment status changed after stay-at-home orders were lifted? Check as many as apply.

- a. No change
- b. Increased hours
- c. Reduced hours
- d. Furloughed (anticipating going back to the same employer)
- e. Laid off (not anticipating going back to the same employer)
- f. Working partially/exclusively from home
- g. Other
