Occupational risk of COVID-19 in the 1st vs 2nd wave of infection

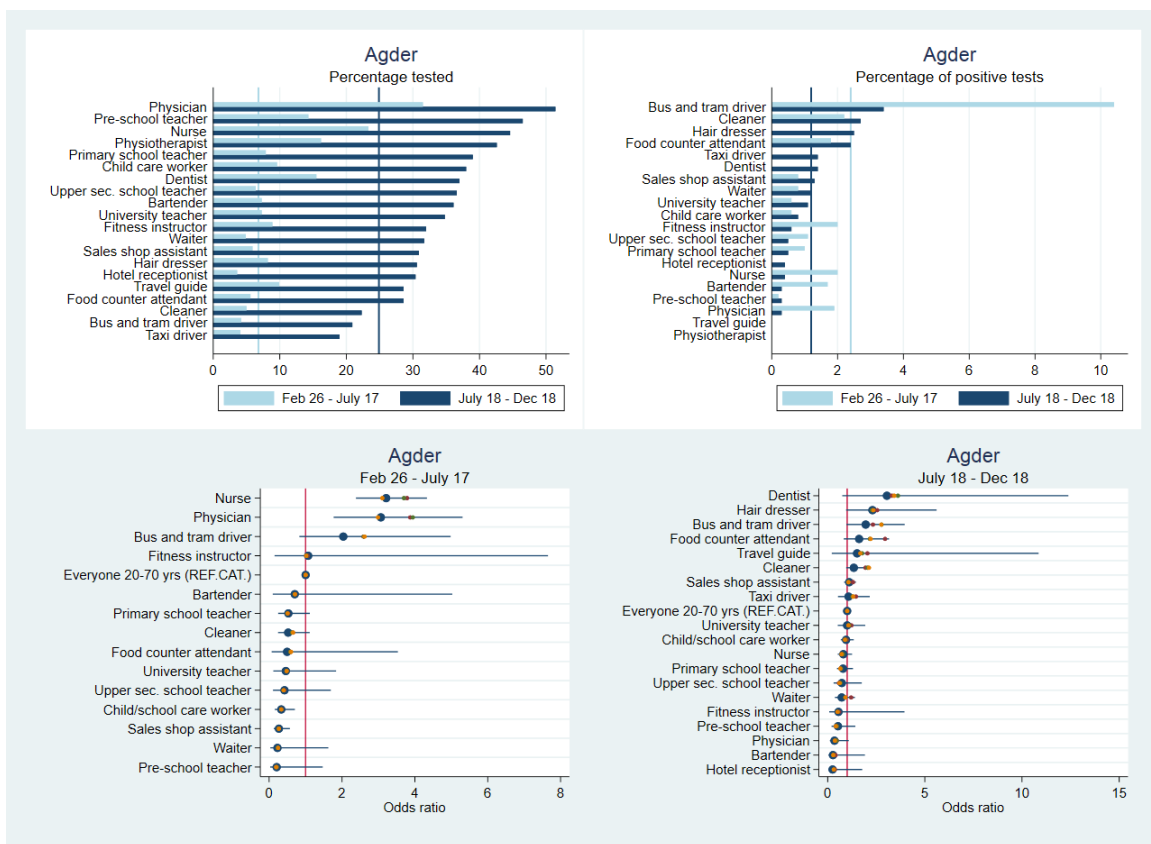

By Magnusson et al., 2020

Supplementary Figure A: Agder	p. 2
Supplementary Figures B-C: Innlandet and Møre og Romsdal	p. 3
Supplementary Figures D-E: Nordland and Oslo	p. 4
Supplementary Figures F-G: Rogaland and Troms og Finnmark	p. 5
Supplementary Figures H-I: Trøndeland and Vestfold og Telemark	p. 6
Supplementary Figures J-K: Vestland and Viken	p. 7

Supplementary Figure A-K. Percentage tested, percentage of the tested who were positive and logistic regression analyses of confirmed SARS-CoV-2 by occupation and county, for the 1st and 2nd wave of infection. Logistic regression models adjustment with following covariates (*crude* includes no covariates):

- Age, sex, continent of birth, mother's continent of birth and testing
- Age and sex
- Age, sex and testing
- Crude

A. Agder

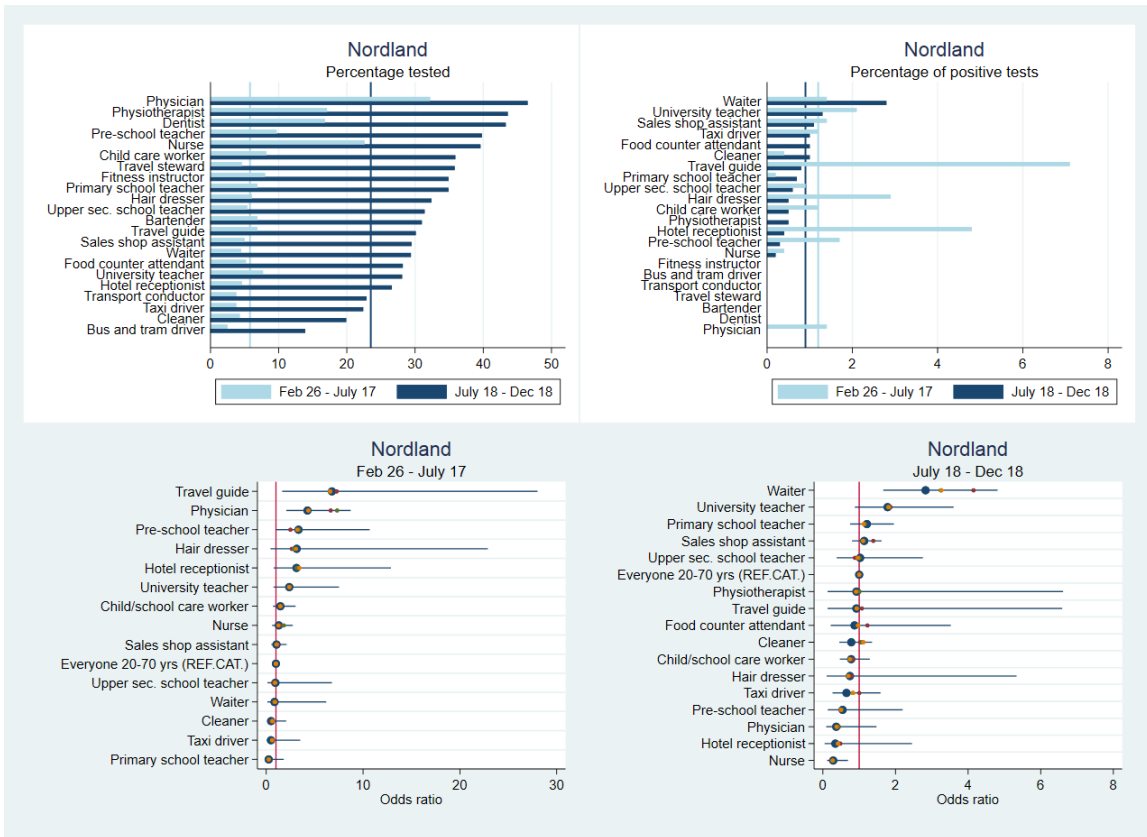

B. Innlandet

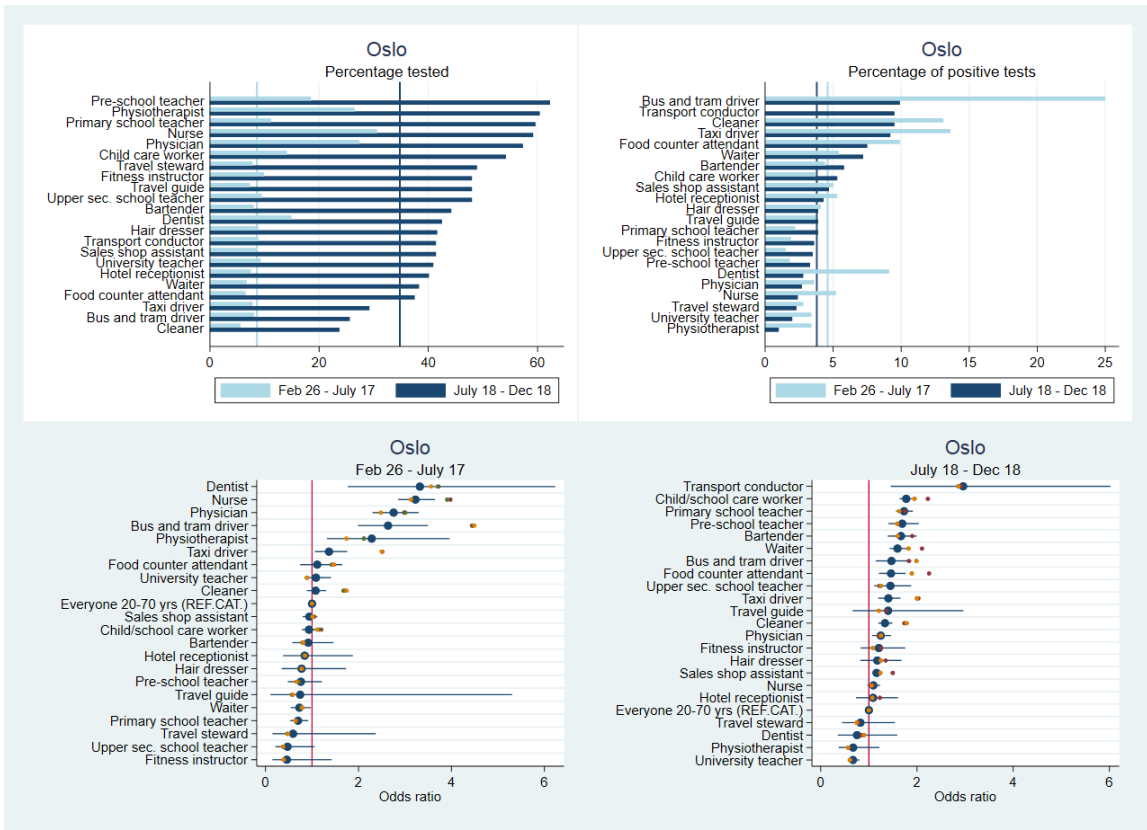

C. Møre og Romsdal

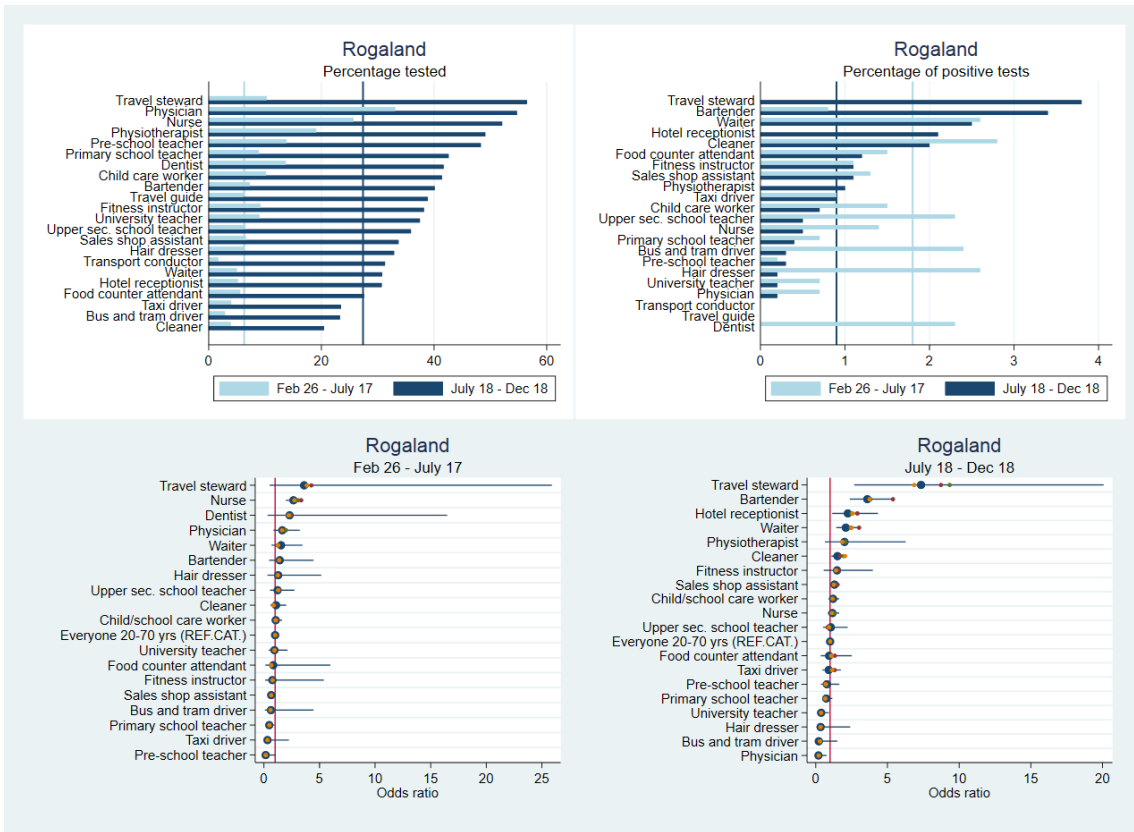

D. Nordland

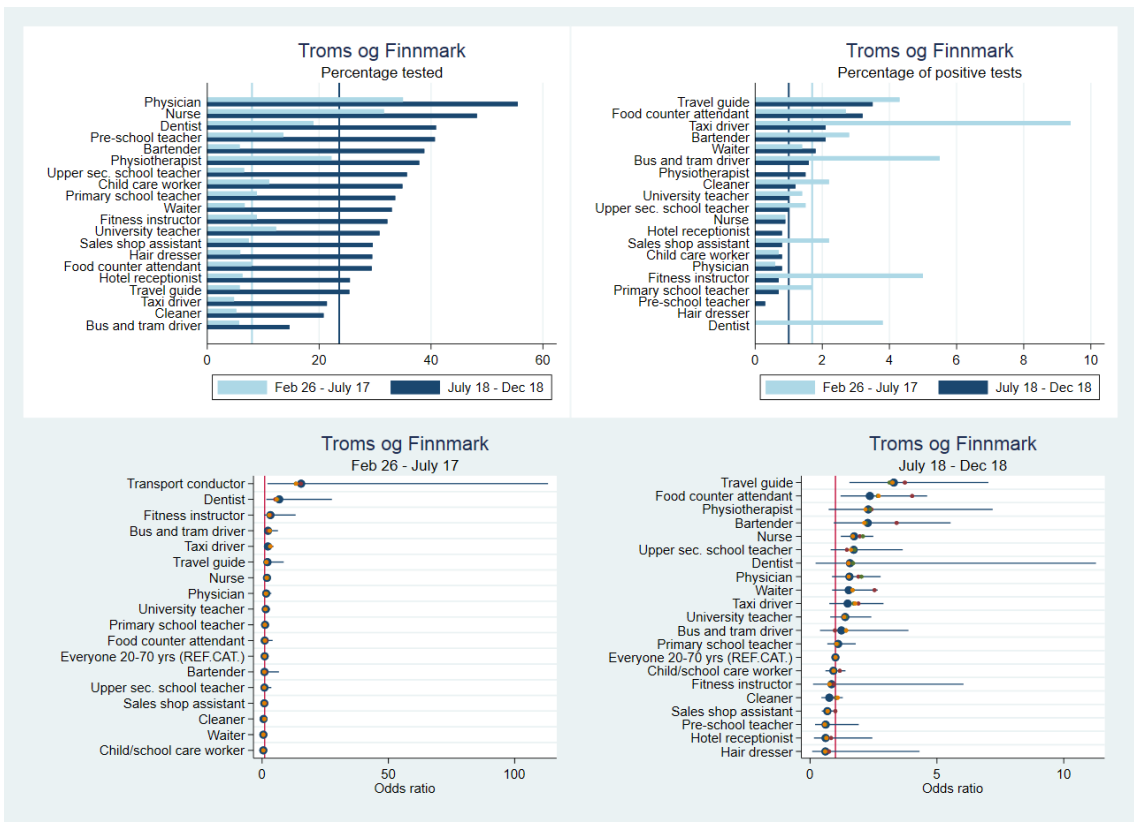

E. Oslo

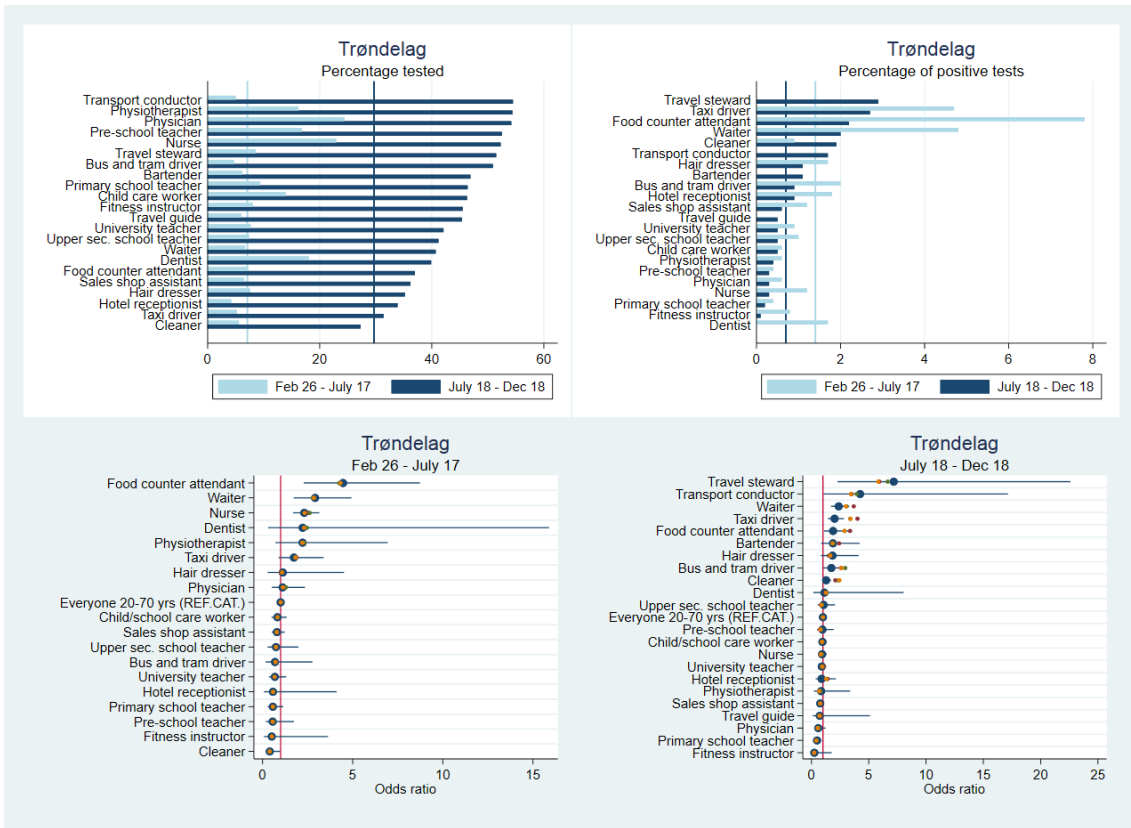

F. Rogaland

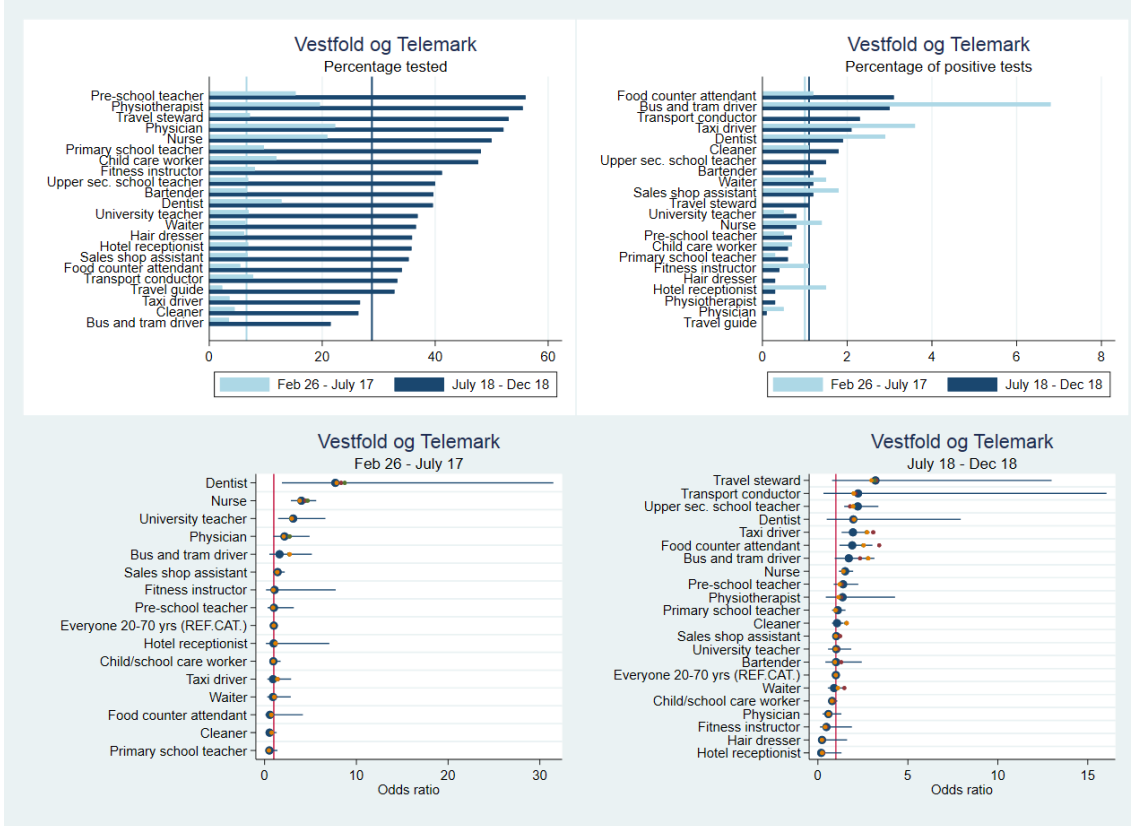

G. Troms og Finnmark

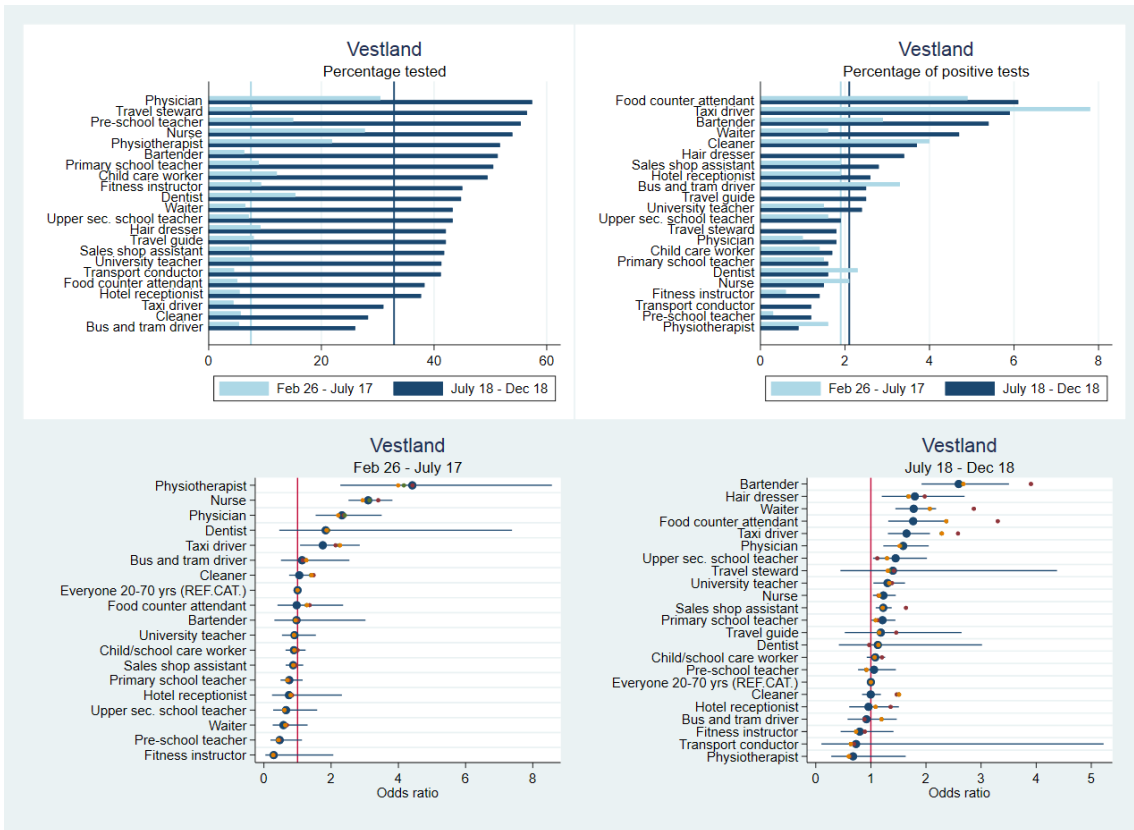

H. Trøndelag

I. Vestfold og Telemark

J. Vestland

K. Viken
