

Supplementary Table 2. Cox Proportional Hazards Models for Incident Dementia by Visual Impairment Status Using Different Thresholds.

VI Status	Age- and Gender-adjusted Model		Multivariable Model ^a	
	HR (95% CI)	P value	HR (95% CI)	P value
VI at 0.6 logMAR				
None	1 [Reference]	-	1 [Reference]	-
VI	2.00 (0.83-4.84)	0.122	2.39 (0.99-5.80)	0.053
VI at 0.7 logMAR				
None	1 [Reference]	-	1 [Reference]	-
VI	2.95 (1.10-7.89)	0.031	3.42 (1.27-9.19)	0.015

VI = visual impairment; HR = hazard ratio; CI = confidence interval.

^a Cox proportional hazards regression models adjusted for age, gender, race/ethnicity, education level, Townsend index, physical activity level, family history of dementia, history of diabetes mellitus, hypertension, and depression.
