

**Supplementary Table 3** Antigen-detecting RDT results with a self-collected NMT swab and a professional-collected NP swab in RT-PCR positive patients, as well as Ct-values, viral load (in descending order), and duration of symptoms per patient. The positive percent agreement between NMT and NP samples on Ag-RDT, and the respective sensitivities compared to RT-PCR are shown.

| No.  | Ag-RDT     |                                     | RT-PCR (OP/NP) |                         | Days of Symptoms | Part of self-sampling with relevant deviation |
|--|------------|-------------------------------------|----------------|-------------------------|------------------|---|
|  | Self NMT   | Prof. NP                            | Ct value       | Viral load <sup>1</sup> |                  |   |
