Contents

- Figure S1
- Figure S2

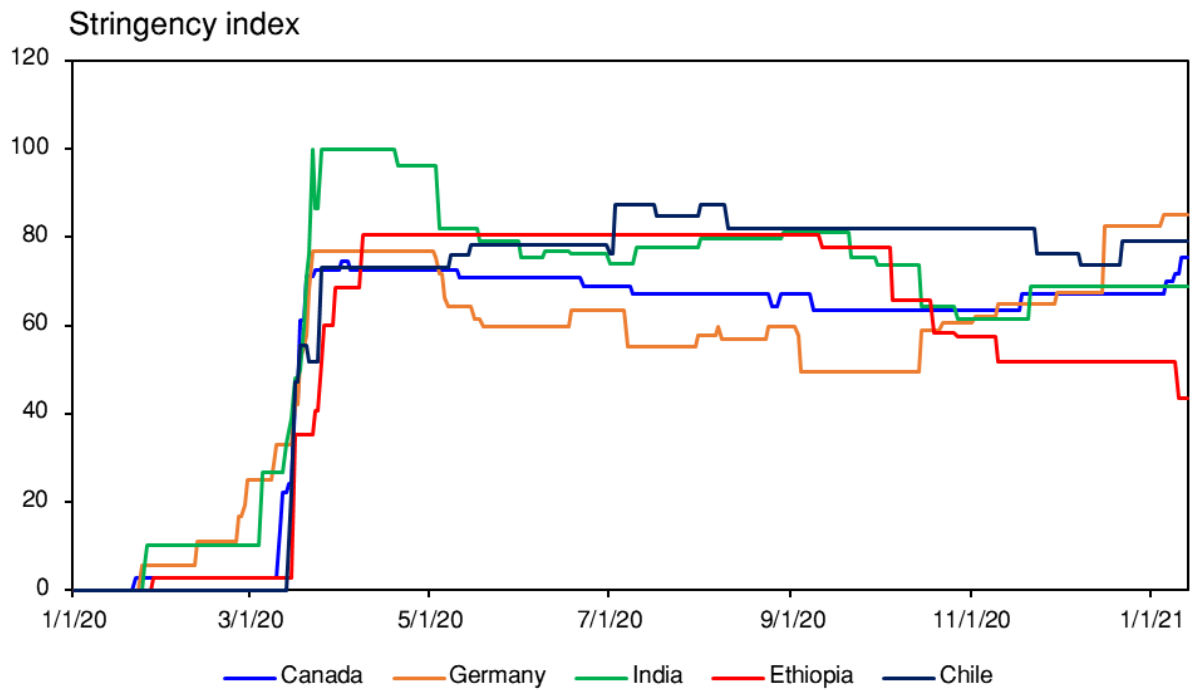

Figure S1: Government Stringency Index. Time series of government stringency index for five representative countries (Table 1). This index is a composite measure based on nine response indicators including school closures, workplace closures, and travel bans.

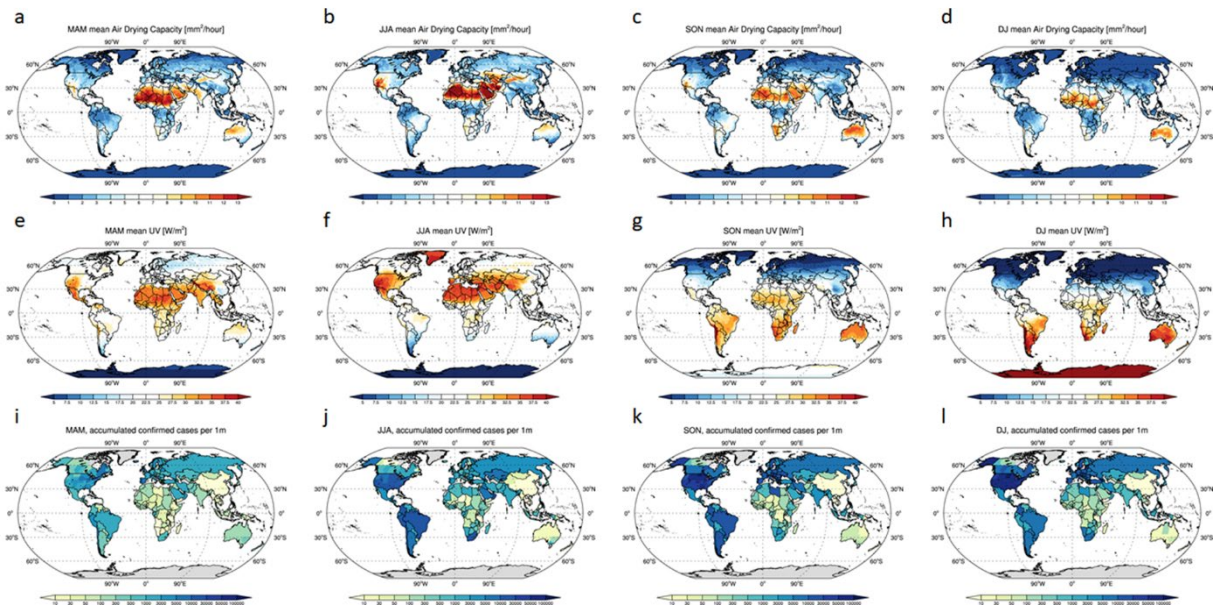

Figure S2: Seasonal mean COVID-19 prevalence and environmental variables. Spatial distribution of seasonal mean (a-d) ADC, (e-h) UV, (i-l) total confirmed COVID-19 cases per 1 million people for (a, e, and i) spring (March to May), (b, f, and j) summer (June to August), (c, g, and k) autumn (September to November), and (d, h, and l) winter (December to January).
