color code	
orange	strong reactivity with only IgG
blue	strong reactivity with only IgA
violet	strong reactivity with both IgG and IgA

Supplementary Figure S1. Percentage of individuals grouped according to high ($\geq 1:160$ VNT) or low neutralization ($< 1:160$ VNT) capacity (n=71).

Supplementary Figure S2. Differential IgG and IgA mean fluorescence intensity of reactivity to selected RBD peptides comparing individuals with high or low neutralization capacities. High N: individuals with high neutralization capacity ($\geq 1:160$ virus neutralization titer); Low N: individuals with low neutralization capacity ($< 1:160$ virus neutralization titer); MFI: mean fluorescence intensity; the median is shown as a solid line, the box indicates the 25th and 75th percentiles, whiskers range from the highest to the lowest value (all data points shown).
