Appropriate Use Criteria

This supplementary Powered Air Purifying Respirator (PAPR) was created as an emergency action in effort to protect people by providing backup Personal Protective Equipment (PPE) options if the standard PPE has become unavailable. This device has not gone through the same regulatory approval process as standard PPE but has gone through a special verification process expedited strictly for the response to the COVID-19 pandemic. The use of this supplementary PAPR should always come secondary to existing PPE equipment, standards, and protocol options if available. The decision to implement this device should be made with careful consideration and under the consultation of the corresponding institution's occupational health and infection control departments.

The information included in this document provides a best-effort protocol to minimize the risk of viral transmission during assembly and delivery, as well as produce PAPRs whose quality is as consistent as possible.
