

Supplemental Materials

Included here are all relevant statistics for our mediational models (reported partially in Table 3 of the main text). Each figure depicts the model in full with statistics included for all direct paths. Each table includes statistics for indirect effects within the model.

Supplementary Figure 1. Direct effects of trust in scientists on COVID-19 test results mediated by COVID-specific predictors

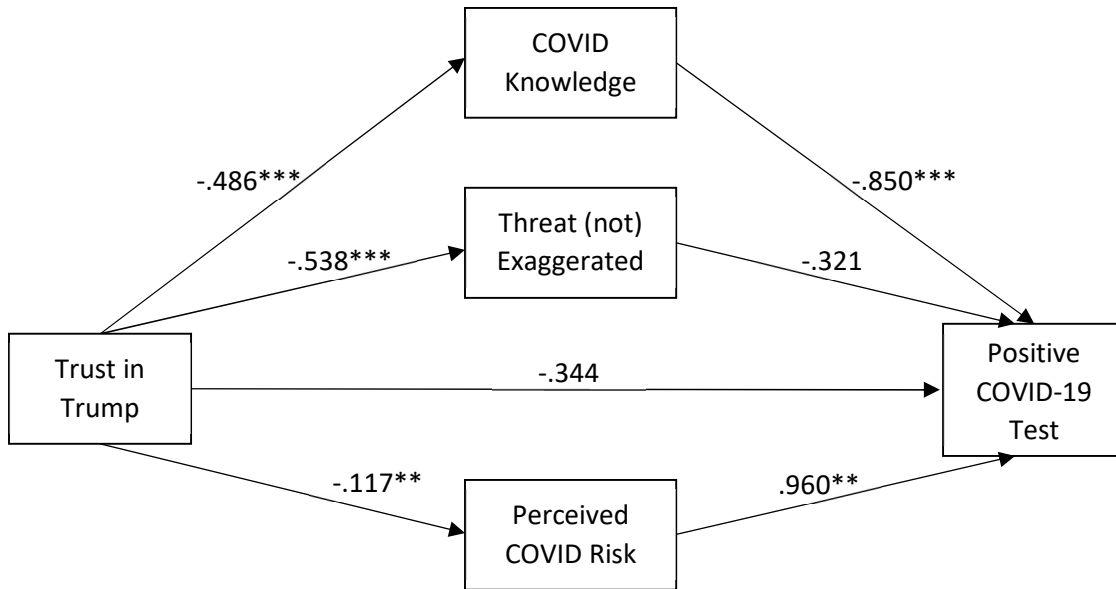

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 1. Indirect effects of trust in scientists on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	-.437 [†]	.197	[-.886, -.104]
COVID Knowledge	-.379 [†]	.206	[-.855, -.036]
Threat (not) Exaggerated	-.116	.205	[-.506, .286]
Perceived COVID Risk	.058	.062	[-.031, .206]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 2. Direct effects of trust in Trump (re COVID-19 crisis) on COVID-19 test results mediated by COVID-specific predictors

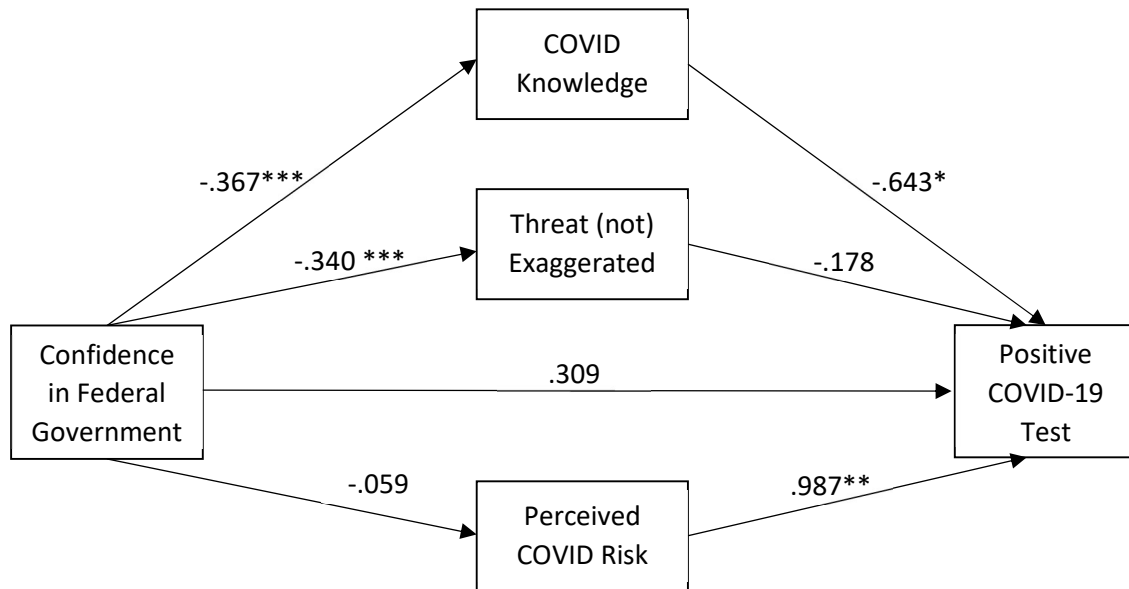

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 2. Indirect effects of trust in Trump (re COVID-19 crisis) on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	$-.474^{\dagger}$.219	[.062, .937]
COVID Knowledge	$.413^{\dagger}$.157	[.163, .774]
Threat (not) Exaggerated	.173	.229	[-.279, .647]
Perceived COVID Risk	$-.112^{\dagger}$.071	[-.292, -.017]

† denotes a 95% confidence interval that does not include zero

Supplementary Figure 3. Direct effects of confidence in federal government (re COVID-19 crisis) on COVID-19 test results mediated by COVID-specific predictors

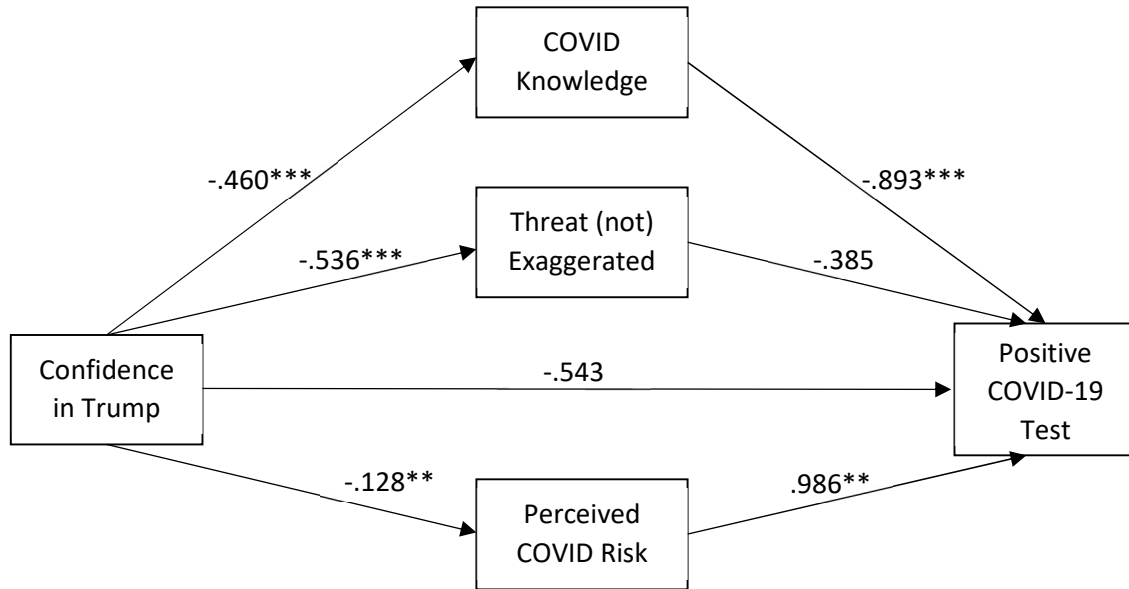

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 3. Indirect effects of confidence in federal government (re COVID-19 crisis) on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.238	.131	[-.016, .508]
COVID Knowledge	.236 [†]	.111	[.049, .491]
Threat (not) Exaggerated	.061	.133	[-.220, .309]
Perceived COVID Risk	-.058	.057	[-.195, .028]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 4. Direct effects of general confidence in Trump on COVID-19 test results mediated by COVID-specific predictors

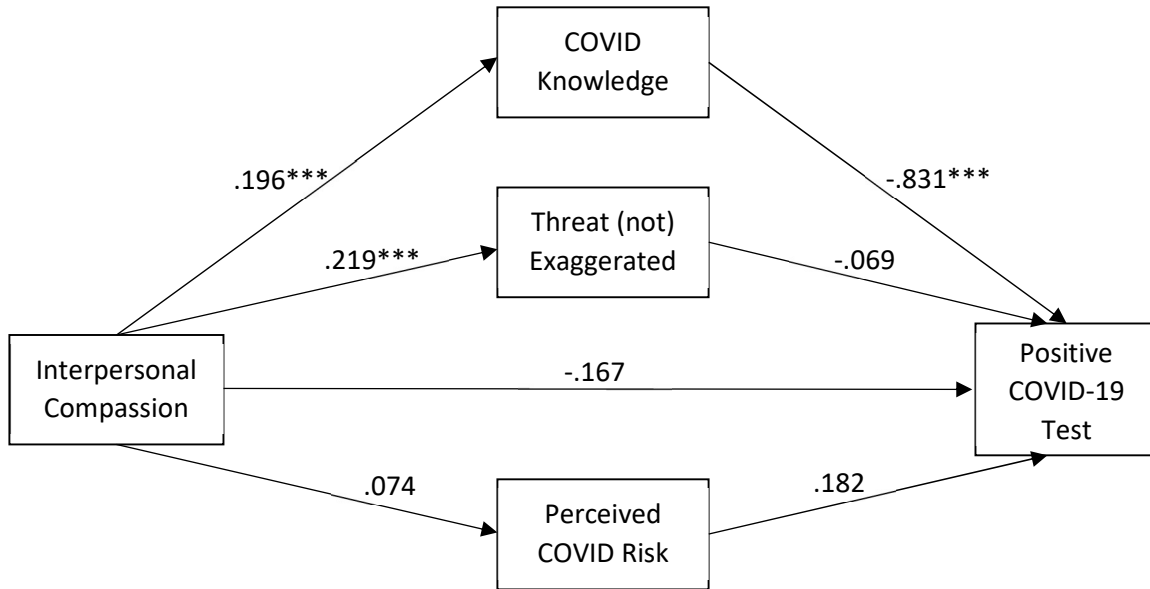

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 4. Indirect effects of general confidence in Trump on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.491 [†]	.197	[.117, .910]
COVID Knowledge	.410 [†]	.147	[.166, .747]
Threat (not) Exaggerated	.206	.214	[-.208, .638]
Perceived COVID Risk	-.126 [†]	.075	[-.316, -.026]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 5. Direct effects of general interpersonal compassion on COVID-19 test results mediated by COVID-specific predictors

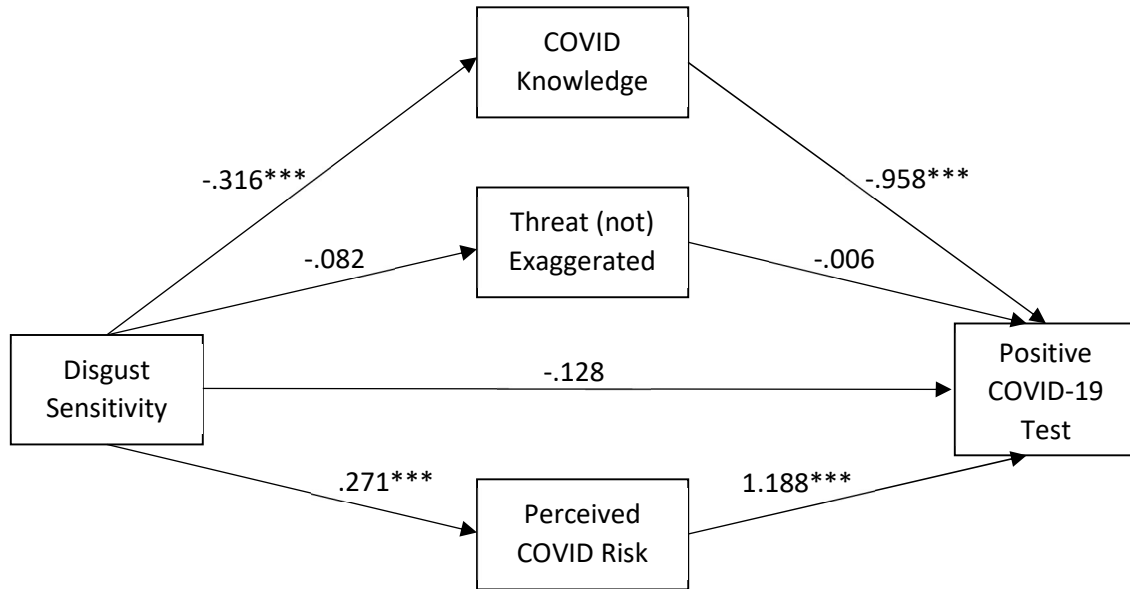

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 5. Indirect effects of general interpersonal compassion on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	$-.165^{\dagger}$.079	$[-.335, -.021]$
COVID Knowledge	$-.163^{\dagger}$.049	$[-.278, -.087]$
Threat (not) Exaggerated	$-.015$.073	$[-.160, .133]$
Perceived COVID Risk	$.013$.024	$[-.026, .073]$

† denotes a 95% confidence interval that does not include zero

Supplementary Figure 6. Direct effects of disgust sensitivity on COVID-19 test results mediated by COVID-specific predictors

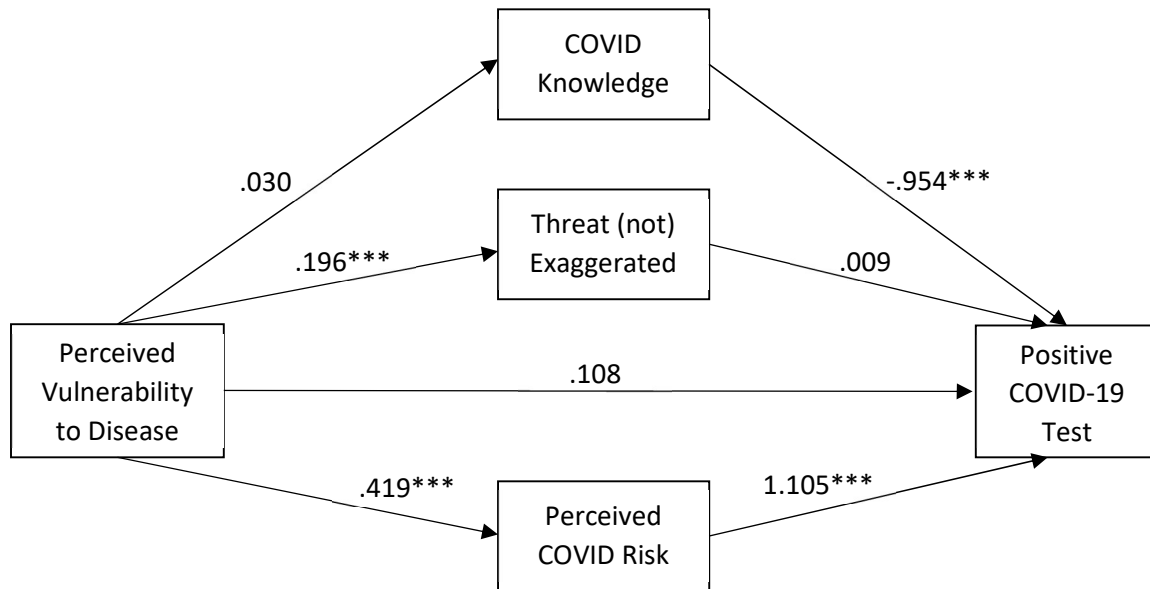

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 6. Indirect effects of disgust sensitivity on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.628 [†]	.146	[.425, 1.010]
COVID Knowledge	.306 [†]	.076	[.193, .494]
Threat (not) Exaggerated	.001	.026	[-.055, .057]
Perceived COVID Risk	.321 [†]	.122	[.145, .622]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 7. Direct effects of perceived vulnerability to disease on COVID-19 test results mediated by COVID-specific predictors

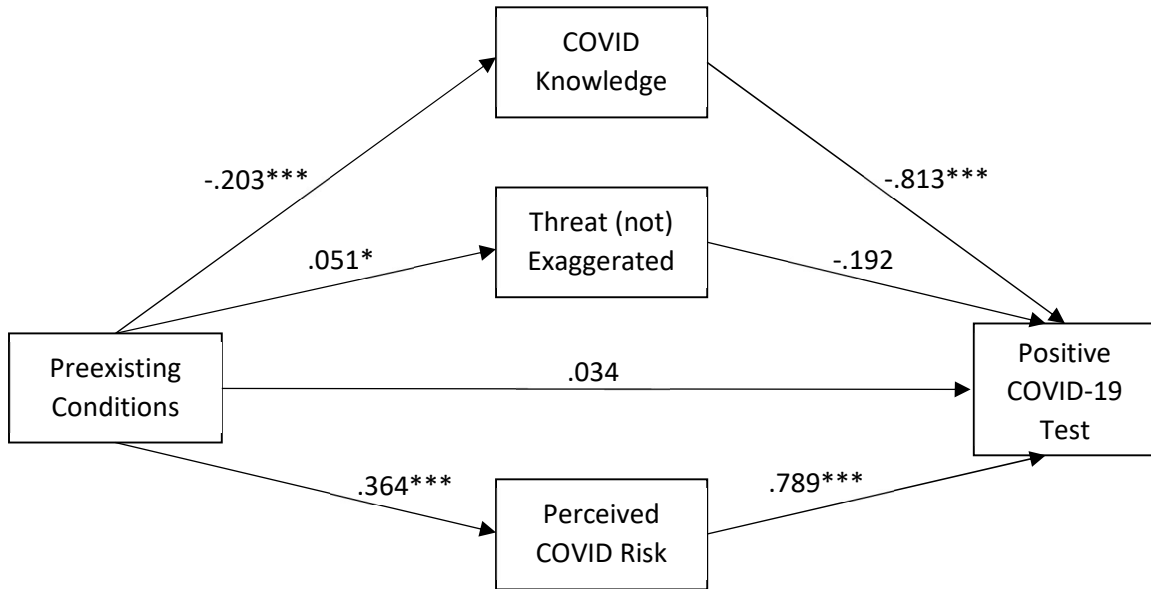

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 7. Indirect effects of perceived vulnerability to disease on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.437 [†]	.180	[.163, .871]
COVID Knowledge	-.028	.028	[-.087, .023]
Threat (not) Exaggerated	.002	.055	[-.108, .116]
Perceived COVID Risk	.464 [†]	.170	[.213, .874]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 8. Direct effects of preexisting conditions on COVID-19 test results mediated by COVID-specific predictors

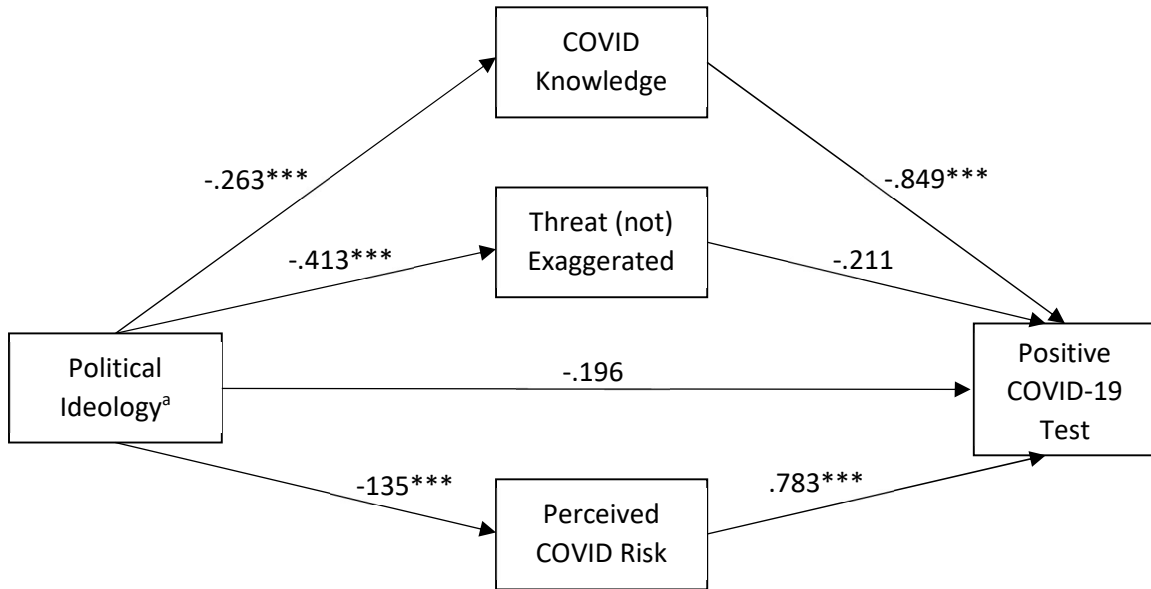

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 8. Indirect effects of preexisting conditions on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.443 [†]	.074	[.317, .605]
COVID Knowledge	.165 [†]	.028	[.115, .227]
Threat (not) Exaggerated	-.010	.010	[-.032, .006]
Perceived COVID Risk	.287 [†]	.070	[.163, .438]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 9. Direct effects of political ideology on COVID-19 test results mediated by COVID-specific predictors

^a Scale from 1 (Extremely liberal) to 7 (Extremely conservative)

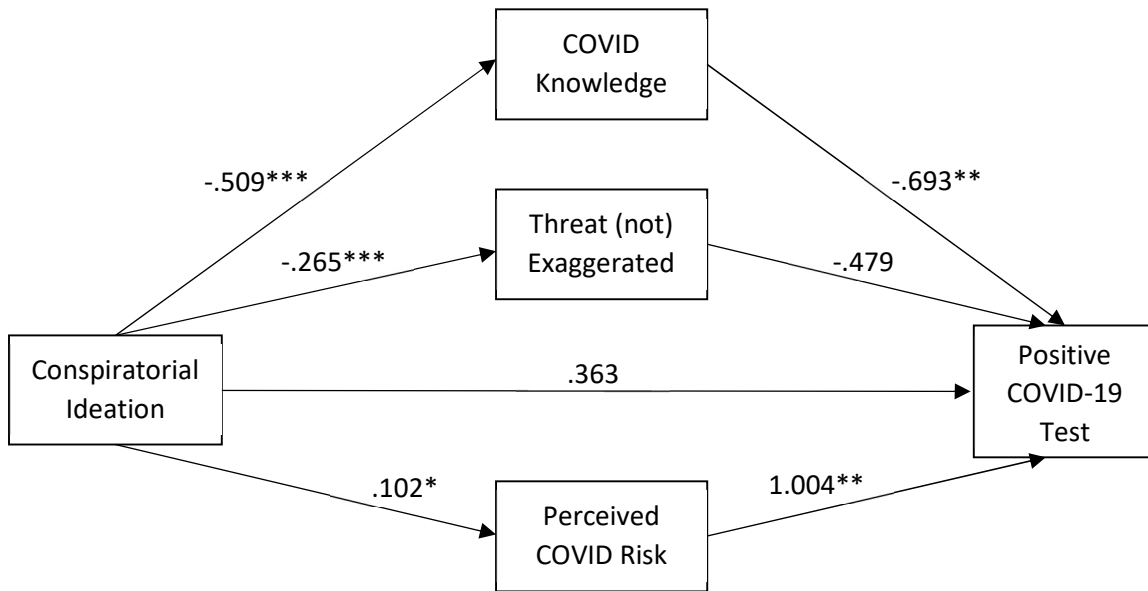

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 9. Indirect effects of political ideology on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.205 [†]	.067	[.072, .336]
COVID Knowledge	.224 [†]	.034	[.162, .298]
Threat (not) Exaggerated	.087	.068	[-.048, .221]
Perceived COVID Risk	-.106 [†]	.032	[-.178, -.054]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 10. Direct effects of conspiratorial ideation on COVID-19 test results mediated by COVID-specific predictors

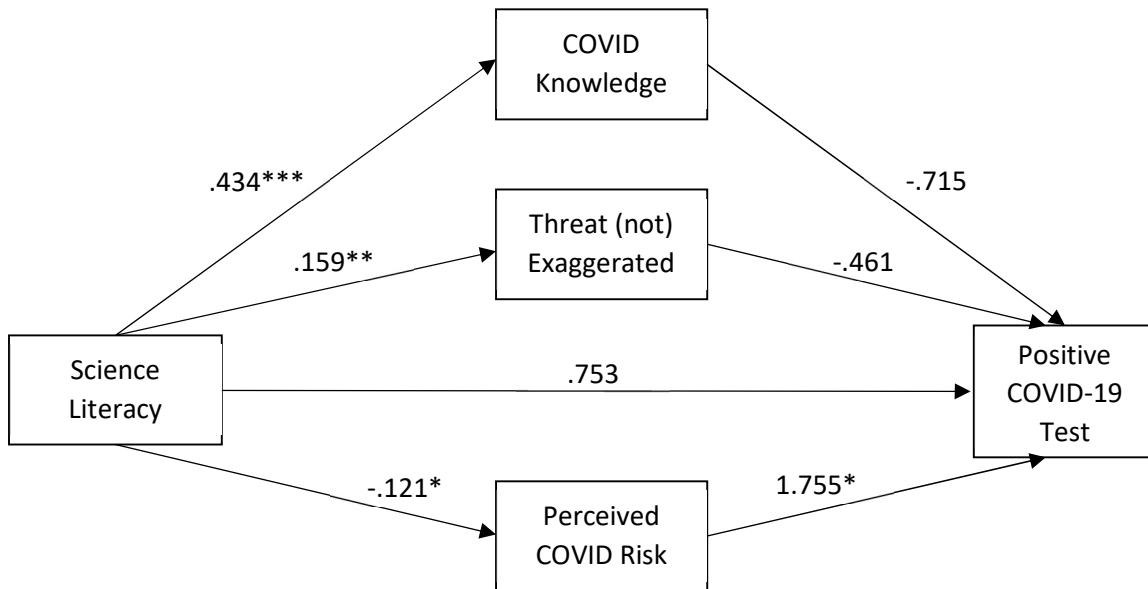

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 10. Indirect effects of conspiratorial ideation on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.582 [†]	.143	[.366, .932]
COVID Knowledge	.353 [†]	.133	[.132, .665]
Threat (not) Exaggerated	.127	.099	[-.057, .339]
Perceived COVID Risk	.102 [†]	.063	[.009, .254]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 11. Direct effects of science literacy on COVID-19 test results mediated by COVID-specific predictors

* $p < .05$; ** $p < .01$; *** $p < .001$

Note: The science literacy scale was included only in Study 1 at Time 1. Of the 304 participants who were responded to this measure, only 5 had positive COVID-19 tests. The bootstrapped mediational model failed to converge. Hence, the estimates should be interpreted cautiously.

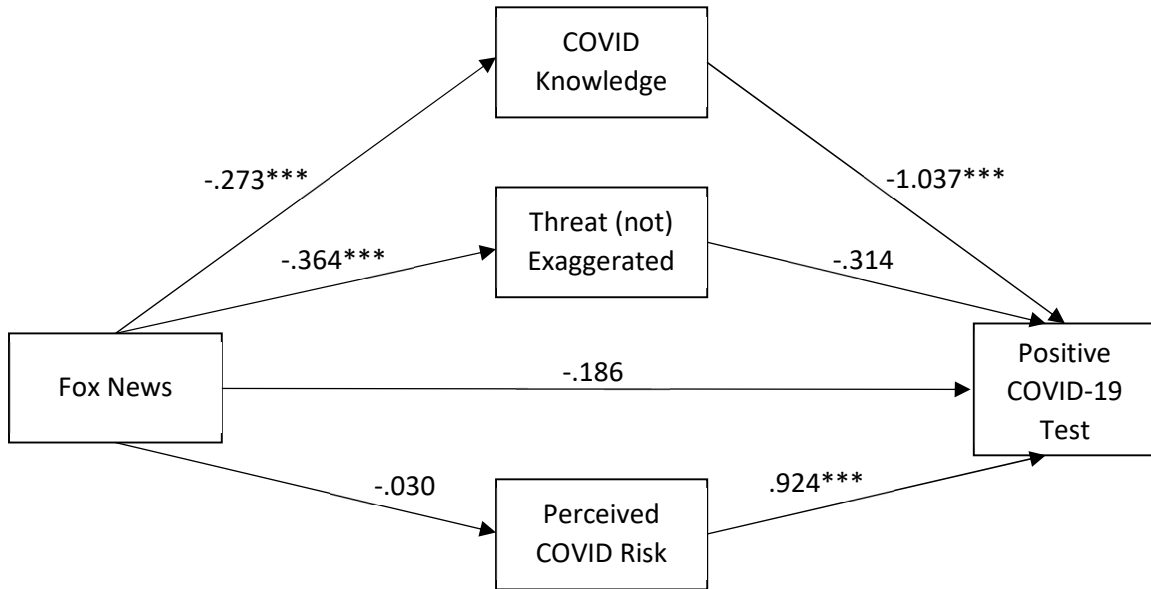

Supplementary Table 11. Indirect effects of science literacy on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	-.595 [†]	295,828.911	[-413.573, -.186]
COVID Knowledge	-.310	111,285.505	[-136.126, .322]
Threat (not) Exaggerated	-.073	88,852.714	[-104.762, .361]
Perceived COVID Risk	-.212	122,323.743	[-166.759, .019]

[†]denotes a 95% confidence interval that does not include zero

Note: The science literacy scale was included only in Study 1 at Time 1. Of the 304 participants who were administered this measure, only 5 had positive COVID-19 tests. The bootstrapped mediational model failed to converge. Hence, the estimates should be interpreted cautiously.

Supplementary Figure 12. Direct effects of Fox News use on COVID-19 test results mediated by COVID-specific predictors

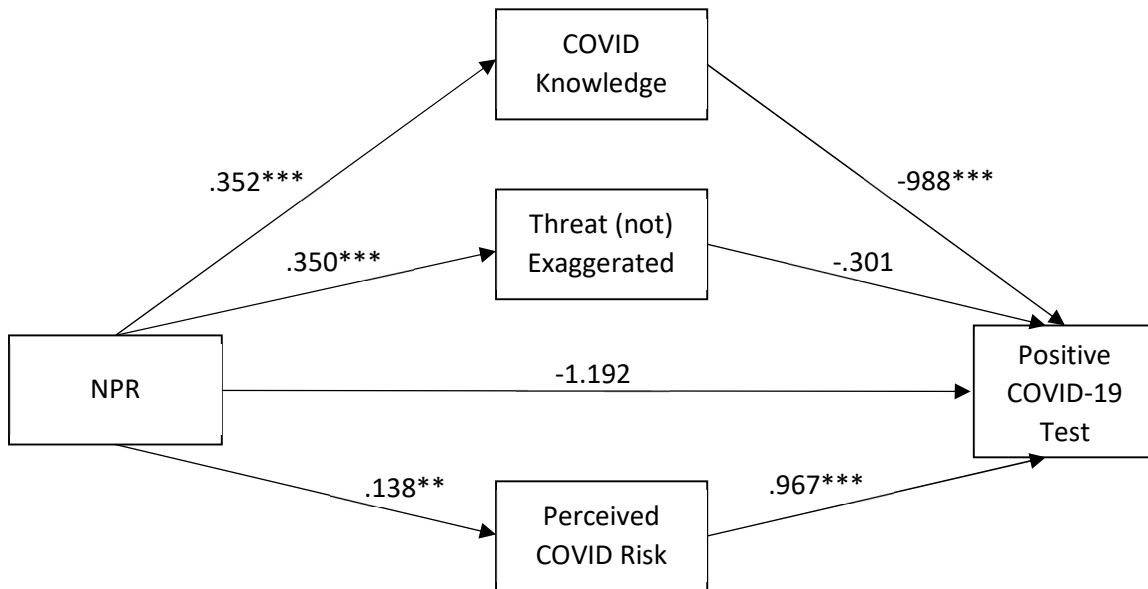

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 12. Indirect effects of Fox News use on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	.370 [†]	.099	[.189, .580]
COVID Knowledge	.284 [†]	.065	[.178, .433]
Threat (not) Exaggerated	.114	.089	[-.059, .298]
Perceived COVID Risk	-.028	.046	[-.123, .057]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 13. Direct effects of NPR use on COVID-19 test results mediated by COVID-specific predictors

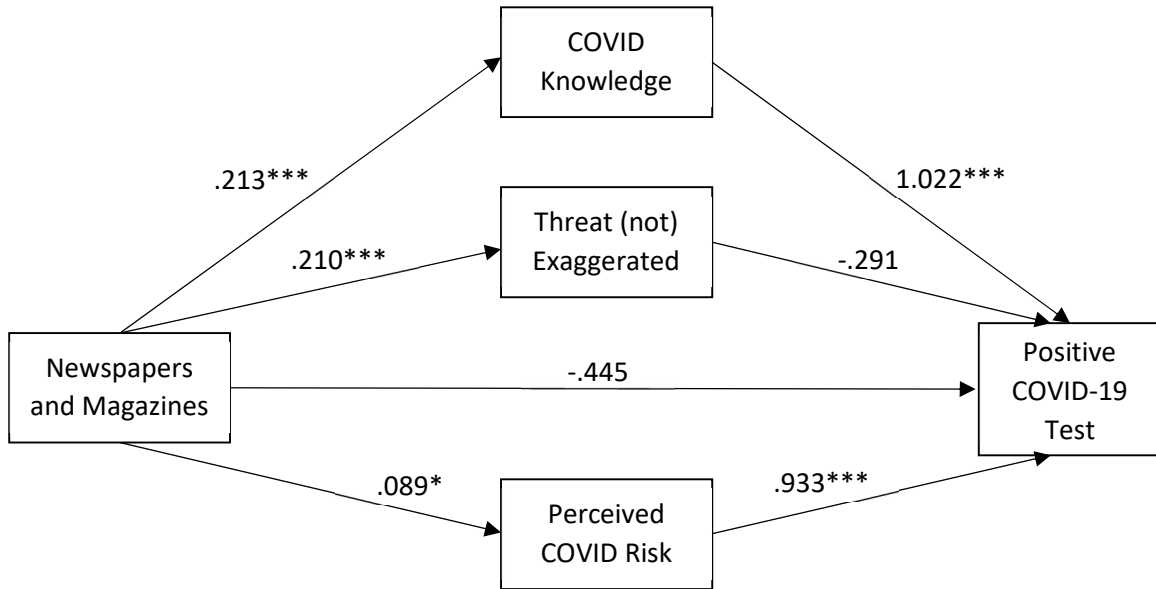

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 13. Indirect effects of NPR use on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	-.320 [†]	.102	[-.528, -.126]
COVID Knowledge	-.348 [†]	.067	[-.500, -.238]
Threat (not) Exaggerated	-.106	.084	[-.283, .050]
Perceived COVID Risk	-.134 [†]	.064	[.033, .285]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 14. Direct effects of national newspaper and/or magazine use on COVID-19 test results mediated by COVID-specific predictors

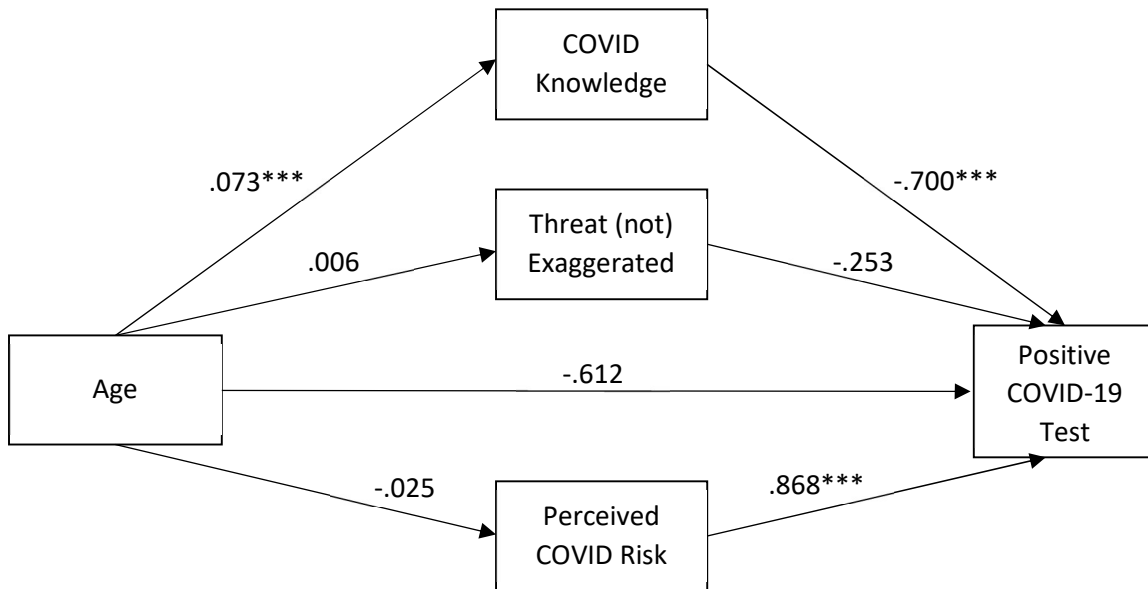

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 14. Indirect effects of national newspaper and/or magazine use on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	-.196 [†]	.077	[-.356, -.050]
COVID Knowledge	-.218 [†]	.052	[-.338, -.132]
Threat (not) Exaggerated	-.061	.051	[-.168, .035]
Perceived COVID Risk	.083 [†]	.044	[.010, .185]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 15. Direct effects of age on COVID-19 test results mediated by COVID-specific predictors

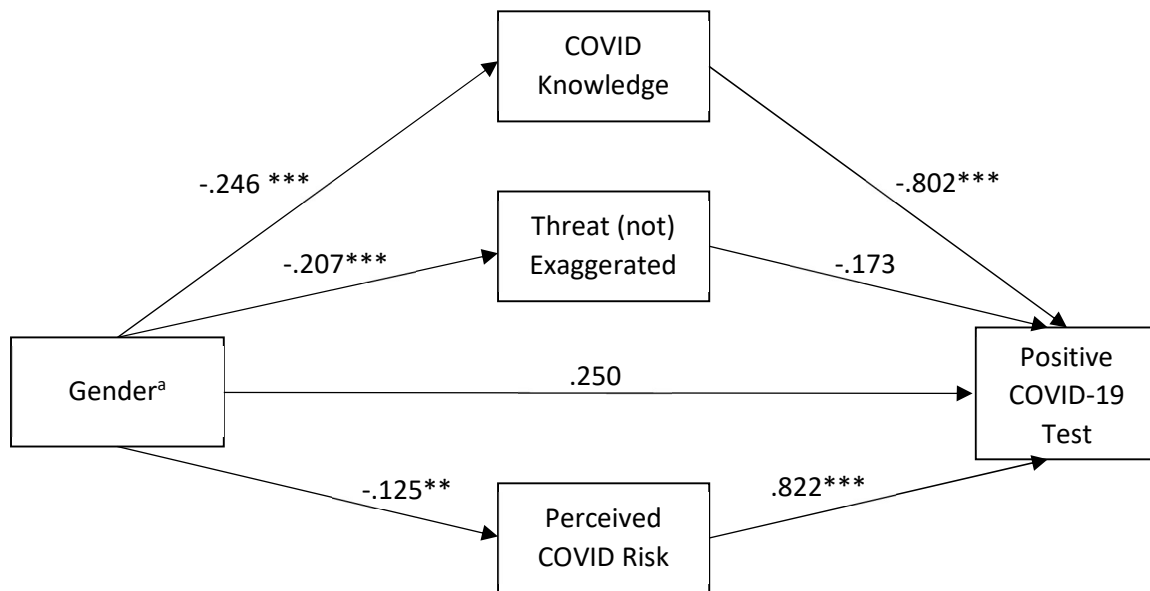

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 15. Indirect effects of age on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	-.074 [†]	.043	[-.176, -.019]
COVID Knowledge	-.051 [†]	.028	[-.117, -.016]
Threat (not) Exaggerated	-.002	.007	[-.022, .009]
Perceived COVID Risk	-.022	.020	[-.073, .004]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 16. Direct effects of gender on COVID-19 test results mediated by COVID-specific predictors

^a Coded 1=male and 0=female; “Other” and “Prefer not to answer” responses were coded as missing for ease of interpretation

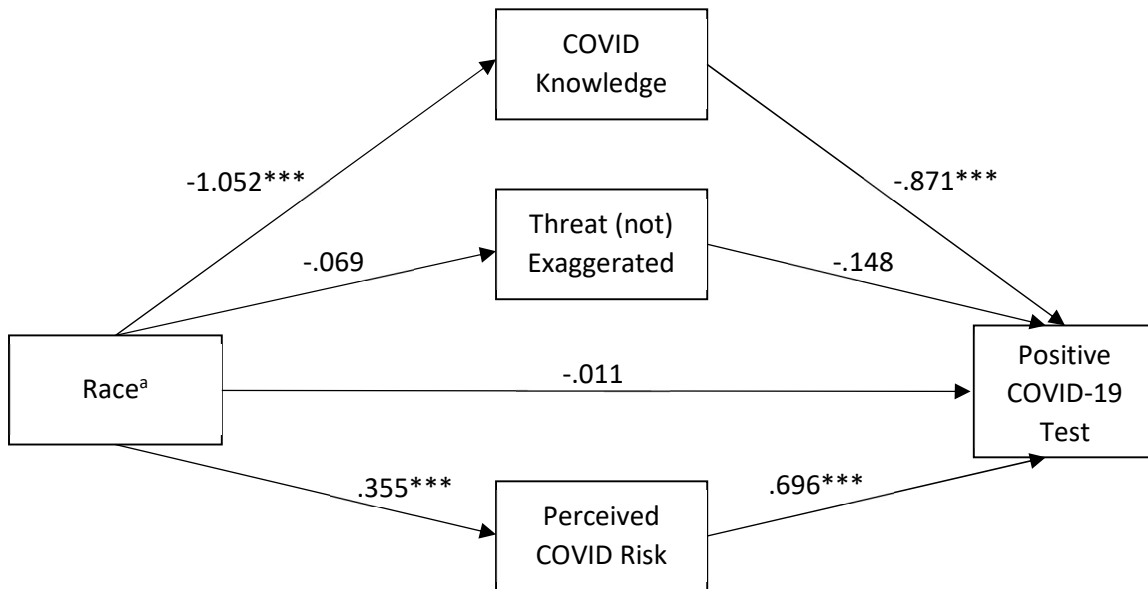

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 16. Indirect effects of gender on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	-.131	.068	[-.005, .262]
COVID Knowledge	.198 [†]	.043	[.122, .289]
Threat (not) Exaggerated	.036	.036	[-.034, .110]
Perceived COVID Risk	-.102 [†]	.044	[-.204, -.029]

[†]denotes a 95% confidence interval that does not include zero

Supplementary Figure 17. Direct effects of race on COVID-19 test results mediated by COVID-specific predictors

^a Coded 1=Black and 0=White; all other racial and ethnic categories were coded as missing for ease of interpretation

* $p < .05$; ** $p < .01$; *** $p < .001$

Supplementary Table 17. Indirect effects of race on COVID-19 test results

	Indirect Effect	SE	95% Confidence Interval
TOTAL	1.173 [†]	.184	[.849, 1.563]
COVID Knowledge	.916 [†]	.154	[.648, 1.257]
Threat (not) Exaggerated	.010	.021	[-.025, .062]
Perceived COVID Risk	.247 [†]	.090	[.103, .455]

[†]denotes a 95% confidence interval that does not include zero
