

Supplementary figure 1. Scatter plot of genetic correlation between male and female effect estimates for chronotype instrument.

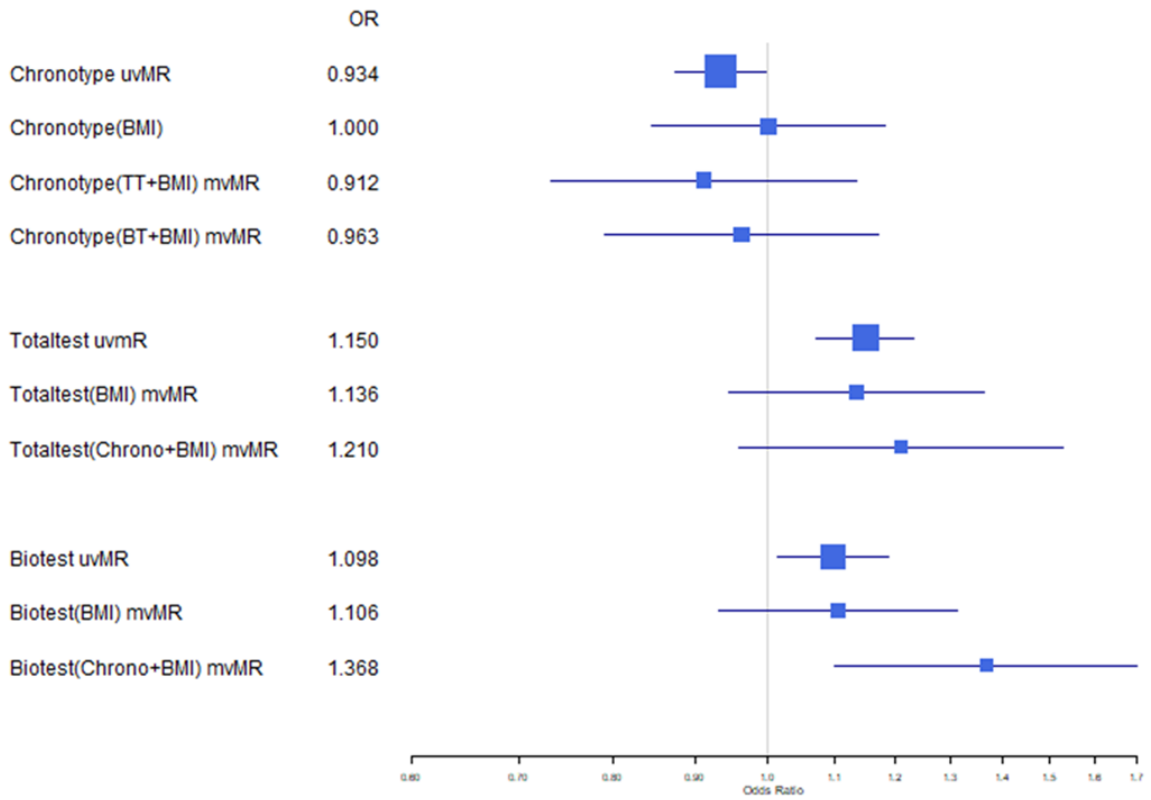

Supplementary figure 2. Heterogeneity analysis for MR of chronotype on breast cancer subtypes. Study numbers = 1. Luminal A (ER+/PR+, HER2-); 2. Luminal B (ER+/PR+/-, HER2+); 3. Luminal B (ER+/PR+/-, HER2-, Ki 67 > 14%); 4. HER2 (ER-, PR-, HER2+); and 5. Triple Negative (ER-, PR-, HER2-).

Supplementary figure 3. Forest plot of uvMR results for A) total testosterone, B) bioavailable testosterone and C) SHBG effects on breast cancer subtypes.

Female

Supplementary figure 5. Forest plot of bivariate (adjusted for BMI only) and trivariate (adjusted for chronotype/sex hormone and BMI) mvMR results in females.
