

Supplementary Table 1. Accuracy measures between algorithm predictions and experts' segmentations. The table includes accuracy measures (Dice scores) for each MRI in the test set, used to calculate mean and median accuracy measures between algorithm predictions (**Prediction**) and ground truth (**Ground**), and to evaluate inter-expert variability between clinical experts (**Expert_1, Expert_2, Expert_3**) and ground truth and within clinical experts.

MRI scan number	Prediction/Ground	Prediction/Expert_1	Prediction/Expert_2	Prediction/Expert_3	Expert_1/Ground	Expert_2/Ground	Expert_3/Ground	Expert_1/Expert_2	Expert_1/Expert_3	Expert_2/Expert_3

Supplementary Table 2. Tumor volume values. Tumor volume values (in cc) for each MRI in the test set, calculated for ground truth (**Ground**), algorithm prediction (**Predicted**), 2D and 3D estimation techniques (**2D estimation**, **3D estimation**), clinical experts' segmentations (**Expert_1**, **Expert_2**, **Expert_3**). These measures were used to evaluate differences in tumor volume calculation between algorithm, clinical experts and estimation techniques.
