**Table S2 A – Table of cognitive outcome measures in young adults**

Table summarising the young adult subjects' performance on the computer battery of tests. Test outcomes are presented on rows, separated by treatment group. Mean scores and standard deviation (SD) are presented at the baseline, 1 hour post treatment, and 2 hour post treatment assessment time-points. The difference in score to the baseline is also presented for the 1 hour post-treatment, and 2 hour post-treatment assessment time-points.

		Pre-baseline		Post-baseline		Pre-1h		Post-1h		Pre-2.5h		Post-2.5h

**Table S2 B – Table of physiological outcomes in young adults**

Table summarising the physiological assessments for the young adult subjects. Test outcomes are presented on rows, separated by treatment group. Mean scores and standard deviation (SD) are presented for assessment time-points pre- and post- the baseline, 1 hour post-treatment, and 2 hour post-treatment assessment time-points for each of the measurements aside from oxytocin, which was only assessed at baseline and 1-hour post treatment time-points.
