1 All covariates measured as percent at ZCTA-level all models employ robust standard errors

2 Overcrowded households defined as > 1 occupant per room in each household, derived from 2018 American Community Survey 5-year estimates

3 Multigenerational households defined the estimated number of residences occupied by grandparent and a grandchild less than 18 years of age, derived from 2018 American Community Survey 5-year estimates

4 Derived from the Centers of Disease Control 500 Cities project

5 COPD is chronic obstructive pulmonary disease

6 Smoking defined as residents ≥ 18 years who are current smoking

7 Derived from 2018 American Community Survey 5-year estimates

8 Essential worker roles defined using service-oriented, non-public Census Industrial Codes derived from methods described elsewhere¹⁸

[¶] 95% Bayesian credible intervals

[§] INLA is integrated nested Laplace approximation
