

Appendix: Voting outcomes for consensus meeting

High Agreement		Group 1	Group 2	Deciding vote outcome (n=11)
1	Development of Electronic Health Records (EHR) and systems-based approaches to collection and utilisation of Big Data	In	In	NA
2	Governance in the use of 'Big Data' – regulation and responsibility	In	In	Included combined with item 3
3	Cybersecurity and ransomware – Packaging, capturing and transferring data and keeping it safe	In	Out	Included (combined) 11/11 Combined with item 2
4	Ethical Challenges in Big Data Health Research: implications for informed consent and participation	In	Out	11/11

5	Use of mobile devices to gather patient reported symptom outcomes (PRO's)/Patient Performance Status	In	In	NA
6	App design: Clinical input – Safety, efficacy, accuracy and assessment of risk	In	In	NA
7	Telehealth/eHealth to support patients and their families in their own homes	In	In	Combined with item 8
8	Telehealth/eHealth for electronic patient-reported outcomes (ePRO)	In	Out	Included 11/11 combined with item 7
9	VR: for education and training needs	Out	Out	
Moderate Agreement		Group 1	Group 2	Vote / Outcome
10	Patient-Generated Health Data (PGHD) – what to collect and how: harnessing and using 'physical function' data via sensor-based technologies (edited)	Out	In	Included 11/11
11	Smart Home Sensors – detect changes in health condition/physical function	Out	In	Included 6/11

Low Agreement		Group 1	Group 2	Vote / Outcome
12	Smart Threads – early development experimental stages but with positive results as a potential diagnostic or monitoring technology, or as a mechanism for displaying information	Out	Out	NA
13	Physical Activity Change Detection (PACD)	Out	In	Included (combined) 10/11 combined with item 15
14	Reducing burdensome interventions for patients: optimising monitoring and recording of physiological signals	Out	Out	NA
15	Wearable Health Trackers	Out	In	Included (combined) 9/11 combined with item 13
16	Wearable fabrics for the detection of stimuli (physical functioning e.g. temperature, motion, strain, activity monitoring)	Out	Out	NA

17	Body area network (BAN) technology	Out	Out	NA
18	Wearable technology – privacy and ethical considerations	Out	Out	NA
19	Portable Hospital-level screening/diagnostics in the home	Out	Out	NA
20	VR: Distraction therapy to ameliorate symptoms – pain, distress, anxiety	In	In	NA
21	VR: grief and bereavement following the death of a patient	Out	Out	NA
22	AI and ML to improve outcomes for individuals: Natural Language Processing (NLP) and systems-based approaches for ‘prediction’ and ‘screening	In	In	NA
23	Role of ‘Big Data’ and AI/ML for Population Health Management – population level data	In	In	NA
24	AI/ML – automation of human processes: ethical and moral issues	In	In	NA
25	Robotics – for assistance and daily living	Out	Out	NA
26	Robotics – for companionship/social inclusion	Out	Out	NA
27	Robotics – optimisation of surgery	Out	Out	NA

28	Robotics – Education (including simulation)	Out	Out	NA
29	Smart Home Sensors – Alert systems and monitoring – home security and controls	Out	Out	NA
30	Smart Cities – Built Environment and Big Data	Out	Out	NA
31	Genome profiling and Personalised Medicine	In	In	NA
32	Genetic editing and biomarker technology for earlier disease detection and possible disease prevention	In Focus on biomarkers rather than genetic editing.	Out	Included 11/11
