Title: Omicron (BA.1) SARS-CoV-2 variant is associated with reduced risk of hospitalization and length of stay compared with Delta (B.1.617.2)

## **Supplementary Materials**

Equation S1 — Adjusted penalized logistic regression.

$$Y_{(Death \mid X)} = \beta_0 + \beta_{1 \mid Omicron} + \beta_{2 \mid age \mid group} + \beta_{3 \mid sex} + \beta_{4 \mid reinfection} + \beta_{5 \mid vaccination \mid status} + \varepsilon$$

Where  $Y_{(Death \mid X)}$  is the Odds of the outcome hospitalization conditional on covariates X (Omicron, age group, sex, previous infection and vaccine status),  $\exp(\beta_{1\ Omicron})$  the odds ratio for the outcome being infected with Omicron variant compared with Delta,  $\exp(\beta_{2\ age\ group})$  are the odds ratios for the outcome being 80 years or older, 65 years old to 80 compared with being 16 to 65 years old,  $\exp(\beta_{3\ sex})$  the odds ratio for the outcome being a female compared with being male,  $\exp(\beta_{4\ reinfection})$  is the odds ratio for the outcome of primary infection compared with reinfection,  $\exp(\beta_{5\ vaccination\ status})$  is the odds ratio for the outcome having incomplete, complete, or complete plus booster compared with unvaccinated,  $\varepsilon$  is the error term.

0.5

AIC: 902.95; Concordance Index: 0.78

Variants were identified by sequencing and SGTF I Author: DGS, INSA

Figure S3. Hazard Ratio for hospitalization in the adjusted model stratified for vaccinated individuals

## Schoenfeld residuals of the adjusted model

The proportional hazard assumption is supported by a non-significant relationship between residuals and time, P Value 0.08

Figure S4. Schoenfeld residuals of the adjusted model for hospitalization

Table S1. Odds Ratio for death in the adjusted model

	Odds ratio	Lower CI	Upper CI	P-value
Omicron	0.140	0.001	1.122	0.069
Age	0.140	0.001	1.122	0.003
(16,65]				
(65,80]	258.531	32.696	33367.876	<0.001
(80,102]	4635.480	595.183	597754.200	<0.001
Sex				
Male	4.663	1.923	12.600	<0.001
Reinfection				
Yes	0.273	0.002	4.030	0.385
Vaccination				
Incomplete	0.959	0.007	11.285	0.979
Complete	0.335	0.131	0.925	0.036
Complete + Booster	0.046	0.008	0.195	<0.001
