

Supplemental Materials

Supplemental Table 1: Deaths per month and age stratum from the 77 deaths we were able to examine.

Month (2020)	Available death certificates	Age \leq 70	Age $>$ 70
March	20	3	17
April	12	2	10
May	10	3	7
June	9	0	9
July	9	4	5
August	12	2	10
September	2	2	0
October	3	1	2

Supplemental Figure 1: The likelihood to die at COVID-19 underlying causes of death after positive PCR-test for severely ill individuals in the specific community we examined. A logistic progression model demonstrating that the likelihood to die of COVID-19 is significantly decreased ($p=0.04$), if death occurred 100 days or later after confirmation of SARS-CoV-2 infection.
