

Supplementary File to accompany the manuscript entitled “*Systematic review of spontaneous reports of myocarditis and pericarditis in transplant recipients and immunocompromised patients following COVID-19 mRNA vaccination*” by Lane et al.

### **Search Strategies used:**

#### **EudraVigilance:**

Searches were conducted within the EudraVigilance online system (<https://www.adrreports.eu/>). Searches were conducted for each mRNA COVID-19 vaccine individually to provide a line listing of reported myocarditis and pericarditis events for the overall population.

Symptom terms: “Myocarditis” and “Pericarditis”

Restrictions: European Economic Area geographic origin only

Returned records were then filtered by reported concomitant medications to use as a proxy for immunosuppression, these search terms were identical to those used in the VAERS medications at time of vaccination, please see below. Where both myocarditis and pericarditis were reported by the same case, this was counted as “Myopericarditis.”

#### **MHRA Yellow Card scheme:**

Searches of MHRA Yellow Card records were conducted by MHRA and provided to the research team for further analysis.
