

Supplementary figures

Supplementary Figure 1: The odds ratio for carriers of risk alleles of FVL and PTM mutations, or both, for each polygenic risk category. The first decile was used as reference to the others. Each point indicates the odds ratios and the bar is lower and upper 95% confidence interval for each odds ratio.

Supplementary Figure 2: Absolute frequencies of risk alleles for rs187725533 variant in *CREB3L1*, PTM and FVL mutations in deep venous thrombosis participants for each polygenic risk category.
