

Supplementary Table 3. Results of all the mediation analyses. We used breastfeeding duration as the independent variable (X), the GM volume of the left POrb/IOFC cluster volume or global GM volume as the mediator (M), and behavioral scores as the dependent variable (Y). We report the standardized coefficients (β) and standard errors (SE).

Behavioral variable (Y)	Mediator (M)	X → M → Y (Indirect effect)	X → M	M → Y	X → Y (Direct effect)	X → Y (Total effect)
