

Supplementary Table 1. Proportions of post-exertional malaise (PEM) and orthostatic intolerance (OI) in people living with post-COVID-19 condition (PL-PCC) separate for men and women, stratified by various periods since testing

Months since positive SARS-CoV-2 test	Men (n=398)						Women (n=557)							
	n	% PEM	95% CI		% OI	95% CI		n	% PEM	95% CI		% OI	95% CI	
3-6	25	44.0	24.5	63.5	32.0	13.7	50.3	28	42.9	24.6	61.2	25.0	9.0	41.0
6-9	40	52.5	37.0	68.0	32.5	18.0	47.0	74	56.8	45.5	68.1	35.1	24.2	46.0
9-12	25	40.0	20.8	59.2	24.0	7.3	40.7	46	39.1	25.0	53.2	19.6	8.1	31.1
12-18	182	40.1	33.0	47.2	31.3	24.6	38.0	216	55.6	49.0	62.2	30.6	24.5	36.7
>18	126	38.9	30.4	47.4	21.4	14.2	28.6	193	50.3	43.2	57.4	28.5	22.1	34.9

CI: confidence intervals; OI: orthostatic intolerance; PEM: post-exertional malaise.
