

### Supplementary figure 3

**Figure 3:** genomic comparisons using coding DNA sequences (CDS) by maps with multiple BLAST comparisons using Proksee online (<https://proksee.ca/>) (Grant et al., 2023), including height published *C. tetani* strains genomes : E88 (GCA\_000007625.1) like reference genome, Havard (GCF\_004119355.1), NIID-071400-001 (GCF\_033128285.1), KHSU-254310-026 (GCF\_033128265.1), KHSU-144316-041 (GCF\_033128185.1), ATCC 453 (GCF\_000762325.1), Mfbjulcb2 (GCF\_003013635) and the two ancients *C. tetani* strains Q7452 (GCF\_949357665.1) and Q7451 (GCF\_949357675.1). (A) : whole genome comparison, (B) plasmid comparison, (C1-3) different very heterogeneous genetic islands between all strains showing genes absence in comparison with reference genome *C. tetani* E88.
