

Supplementary Table A1: Definitions of comorbidities included as baseline adjusters in regression analyses

	Definition	Examples
Cardiovascular	Pathologies or recognised risk factors for cardiovascular events (MI, CVA) related to the heart or vessels in any area of the body	Mitral valve prolapse; dyslipidaemia; hypertension; diagnosed cardiovascular disease
Diabetes	Previous diagnosis of insulin or non-insulin dependent diabetes mellitus	-
Spinal	Previous surgery to the spine or pelvis	Microdiscectomy; fusion; realignment fixation
Respiratory	Pathologies affecting the airways or function of the respiratory system	Chronic obstructive pulmonary disease; asthma;
Smoking history	A notable history of past smoking OR current smoker	-
Pain	A diagnosis of pain requiring prescription medication or history of chronic pain	Neuropathic pain; notable chronic pain; pain sensitisation;
Musculoskeletal	A diagnosis involving the musculoskeletal system OR previous arthroplasty surgery other than the index knee	Hip arthroplasty; osteopenia; Rheumatoid arthritis affecting other joints; contralateral knee arthroplasty;
Cancer	A history of diagnosis affecting any body system including those in remission at the time of surgery or considered clear of the disease	Malignant growths within the skin; breast; colon; prostate;
Other	Any comorbidity not otherwise categorised, often as sequelae to other morbidities	Polyneuropathy; history of migraine; substance dependence; vertigo; gout; renal disease; urinary disorders

Supplementary Table A2: Description of regression models for listed outcomes

	Model outcome	Responses	Definition	Predictors	Model
1	Length of stay	Continuous; Days; Box-cox transformation with optimal lambda x -1	Time from first admission to discharge	Age Gender Comorbidities (binary) Bilateral (binary) Spinal anaesthesia OKS preop 6MWT preop TUG preop	Stepwise linear regression
2	Complications	Categorical Yes; No	Grade 1 - 4 as defined by 17	As above + length of stay	Stepwise weighted binary logistic regression
3	Number of ED presentations	Count	Discrete visit to emergency department	As above	Stepwise Poisson regression
4	OKS MCID TUG MCID 6MWT MCID	Categorical Yes; No	Change in score matched or exceeded threshold	As per 3 + complications	Stepwise weighted binary logistic regression
