Supplementary File 2

This file contains the rstanarm code used for the regression model results from Table 1 in the main paper and full details on all models considered:

Model 1: Analysis from main text (Table 1).

Model 2: Model 1 + random intercept for household.

Model 3: Model 1 + hospital/care home contact added to the model. The relative exposure for contact with hospital and contact with care home reported in Table 1 come from this model. As these questions were only added since 8 May 2020, this regression is restricted to subset of data starting at 8 May.

Model 4: A reduced model with less covariates than model 1.

priors for covariables
 prior for intercept
 prior for covariance matrix (decov function in rstanarm)
