

Supplementary Figure 2. Profile of SARS-CoV-2 Genome Sequences from Lombardy, Italy. Plots of SARS-CoV-2 Genome Coverage against rtPCR Ct Value (A) and the Number of Mapped Reads (B) for the 346 samples described. Each sequence is represented by a dot. (c) Genome coverage map of the 10 SARS-CoV-2 samples representative of the genome coverage obtained. Single nucleotide polymorphisms (with respect to the Wuhan reference genome NC_045512.2) are in red, and uncovered portions are indicated by black gaps.
