MSM=men who have sex with men; determined based on HCV transmission route for RIVM and HIV transmission route for SHM.

**Appendix Table 2. Number of confirmed acute hepatitis C virus (HCV) infections:
by data source, after case-linkage**

Based on A) All HCV cases (acute, chronic, other) with a positive HIV-serostatus; and

B) HCV cases (acute, chronic, other) with both positive or unknown HIV-serostatus.

	Registered number of unique cases per database		Combined data		
A) All HCV positive cases with a positive HIV-serostatus
