

Parameter	Prior distribution / fixed value	Prior bounds
<p>Reproductive number during time interval t</p> <p>R_t</p>	<p>$R_t \sim Uniform(0.1, 6.0)$</p> 	<p>[0.1, 6]</p>
<p>Coefficient of variation in the reproductive number</p> <p>ψ</p>	<p>$\psi \sim Lognormal(2.7, 0.9)$</p> 	<p>[1, 100]</p>
<p>Probability of detecting a reported case during time interval t</p> <p>ρ_t</p>	<p>$\rho_t \sim Beta(1, 1)$</p> 	<p>-</p>
<p>The number of infected individuals at the start of the analysis</p> <p>N_0</p>	<p>$N_0 \sim Uniform(1, 200)$</p> 	<p>-</p>
<p>Weibull distribution parameters for Generation time τ_j</p> <p>α, s</p>	<p>$\alpha = 2.860$ $s = 0.015$ $E(\tau_j) = 5$ days $SD(\tau_j) = 1.9$ days</p> 	<p>Not estimated</p>
