D1: 1 Was the research question or objective in this paper clearly stated?

D2: 2 Was the study population clearly specified and defined?

D3: 3 Was the participation rate of eligible persons at least 50%?

D4: 4 Were all the subjects selected or recruited from the same or similar populations?

D5: 5 For the analyses in this paper, were the exposure(s) of interest measured prior to the outcome(s) being measured?

D6: 6 Was the timeframe sufficient so that one could reasonably expect to see an association between exposure and outcome if it existed?

D7: 7 For exposures that can vary in amount or level, did the study examine different levels of the exposure as related to the outcome?

D8: 8 Were the outcome measures (dependent variables) clearly defined, valid, reliable, and implemented consistently across all study participants?

D9: 9 Were key potential confounding variables measured and adjusted statistically for their impact on the relationship between exposure(s) and outcome(s)?
